# WELCOME TO THE ACC 2020

#### THE AMERICAN AUTOMATIC CONTROL COUNCIL

The American Control Conference is organized under the auspices of the American Automatic Control Council (AACC), which is an association of nine professional societies:

- American Institute of Aeronautics and Astronautics (AIAA)
- American Institute of Chemical Engineers (AIChE)
- American Society of Civil Engineers (ASCE)
- American Society of Mechanical Engineers (ASME)
- Institute of Electrical and Electronics Engineers (IEEE)
- Institute for Operations Research and the Management Sciences Applied Probability Society (INFORMS APS)
- International Society of Automation (ISA)
- Society for Industrial and Applied Mathematics (SIAM)
- Society for Modeling and Simulation International (SCS)

AACC represents the United States to the global control community and supports the mission of the individual member societies in enhancing the role and contributions of automation for the benefit of humankind. AACC is also the US National Member Organization (NMO) of the International Federation of Automatic Control (IFAC), a multinational federation of NMOs, each representing the engineering and scientific societies concerned with automatic control in its country. AACC helps arrange for IFAC events in the U.S. and provides delegates for IFAC committees and leadership.

Organizing the annual, 3-day, cross-disciplinary ACC is the principal technical activity of AACC. The conference typically attracts about 1,300 participants and features about 1,000 refereed papers. The ACC is an internationally recognized control conference with substantial participation from outside the US. Academia, industry, and government are all well-represented. Additionally, AACC offers several annual awards to recognize and honor individuals who have made substantial contributions to control theory and practice. These awards are presented during the annual AACC Awards Ceremony, held at the ACC. AACC also supports control education from K-12 through post-graduate studies. AACC provides opportunities for personal and professional development and recognition to its large cast of volunteers, on whom it is crucially dependent for its operations and success.

The activities of the AACC are governed by a Board of Directors. Each AACC member society appoints a director. Operational responsibilities for the AACC rest with five officers, who report to the Board. Operating committees for ACCs, awards committees, etc., report to the officers. All directors, officers, and committee members are volunteers.

To learn more about AACC please visit www.a2c2.org.

### GREETINGS FROM THE AACC PRESIDENT

On behalf of the American Automatic Control Council (AACC), I am pleased to welcome you to the 2020 American Control Conference (ACC) in Denver. ACC attracts participants from academia, industry, and government; from around the world; and, from a wide range of disciplines including all the engineering and control-relevant branches of applied mathematics.

AACC is a federation of nine professional societies: American Institute of Aeronautics and Astronautics (AIAA), American Institute of Chemical Engineers (AIChE), American Society of Civil Engineers (ASCE), American Society of Mechanical Engineers (ASME), Institute of Electrical and Electronics Engineers (IEEE), the International Society for Automation (ISA), the Society for Modeling & Simulation International (SCS), the Society for Industrial and Applied Mathematics (SIAM), and Applied Probability Society as a subdivision of the Institute for Operations Research and the Management Sciences (INFORMS APS). The mission of the AACC is to promote cooperation among the various segments of the automatic control profession within the U.S. and to represent the U.S. in international activities. To this end, AACC manages the ACCs, supports control-related workshops and symposia, represents the U.S. in the International Federation of Automatic Control (IFAC), provides volunteers for IFAC activities, and undertakes other initiatives that promote and coordinate developments in the automatic control field.

AACC was founded more than sixty years ago in 1957 and had its first organizational meeting that year in Chicago. Among the various AACC activities, the largest single activity is ACC organization, which begins about five years in advance. The American Control Conference has had two name changes in its history. The first conference – the National Automatic Control Conference – was held in 1959 in Dallas. The very next year the conference was renamed the Joint Automatic Control Conference, which ran until 1981. AACC decided to change the conference name to the American Control Conference during an operational change in which the conference went from being organized each year by one of its member societies (which would rotate among the societies) to being organized by an operating committee whose members are drawn from multiple societies. Each operating committee is led by a General Chair and a Program Chair. These positions as well as the operating committee members change each year.

AACC is an organization led and run by volunteers. The governing body of the AACC is its Board of Directors. Each member society appoints one Board member. The Board provides overall governance of AACC and elects the Chairs of various committees, the ACC General and Program Chairs, and the Officers who are responsible for operations and recommendations to the Board.

Each ACC is both a presentation of the latest research results in and a celebration of automatic control. In addition to the peer-reviewed papers in the conference proceedings, each ACC features workshops, special sessions, exhibits, and social events which include a banquet, opening and closing receptions, and the annual AACC Awards Ceremony.

Please join me in thanking the General Chair Santosh Devasia, the operating and program committees, the AACC Board and Officers, and many others for their volunteer contributions.

I extend my best wishes to all conference participants for an enjoyable, stimulating, and productive ACC.

Jay A. Farrell AACC President, 2019-2020

#### GREETINGS AND THANKS FROM THE GENERAL CHAIR

On behalf of the Operating Committee, it is my great pleasure to welcome you to the 2020 American Control Conference in Denver, Colorado. The success of any conference depends first and foremost on its participants, and thus we thank you sincerely for choosing ACC as a forum for disseminating your work. As part of a vital community of colleagues and friends, we are also extremely grateful for your companionship in Denver.

The 2020 ACC Operating Committee (OpComm) has brought together their diverse collective experience to develop new innovations for the conference. These include: (i) the Rapid Interactive (RI) sessions that enable participants to present to a large portion of the attendees and for attendees to get a sampling of the many research results in an area, which has been popular at other conferences, e.g., in the Robotics Community; (ii) the fifty or so late-breaking poster presentations (without the need to submit a full paper) that is becoming an increasingly preferred way to communicate emerging ideas in conferences; and (iii) incorporating Federal funding from NSF (through the efforts of our Vice-Chair for Student Affairs, Kira Barton) to increase the diversity of students participating in ACC. We welcome your remarks and comments on the effectiveness of these and potential ways to improve further.

ACC is our conference, managed by volunteers from our societies. Hence, I am very thankful to the large community of dedicated volunteers that support ACC activities, including but not limited to the conference OpComm (each of whom played a key role to 2020 ACC's success), the review team (including the Program Chair Martha Grover, the reviewers, the program committee, the Associate Editors, and the Conference Editorial Board) for maintaining the high quality of the ACC program, the American Automatic Control Council (its officers as well as the Steering Committee) for sharing their collective wisdom on the mechanics of putting together a conference, and the current and past OpComms for being generous in sharing their ideas, time, and knowledge. Finally, thanks to Bob Judd, to whom I am indebted to for helping with the hotel and site selection process and the many contracts, and in this special year for renegotiating with the hotel as we transitioned to a fully online conference.

It was heartwarming to find the strong interest in the conference from our community, in spite of the Covid-19 situation. Most of the authors of the more than 800+ papers felt sufficient value to submit their final papers to ACC and registering, while paying the full conference fees. Due to the volunteer spirit in our community, we were able to lower the overall registration rates, and refund a substantial portion of the fees back to the registrants. I am very grateful to the support and guidance from the OpComm members and the AACC board and officers all through this transition process.

We are anticipating strong participation in ACC 2020 from our community, and we hope to try and hold most of the typical events. You should expect your attendance to be both informative and enjoyable. I hope to see you online in July.

Santosh Devasia General Chair, 2020 American Control Conference

#### TECHNICAL PROGRAM OVERVIEW

Welcome to the 2020 American Control Conference. We are excited to bring together control researchers from a range of disciplines to discuss theoretical developments of common interest and diverse applications in engineering and science. This year we are proud to feature a new presentation format in the morning Rapid Interactive (RI) sessions. On each of the three mornings of the conference, there will be two parallel RI sessions. The intent of the RI sessions is to increase the visibility of your work and to promote more indepth discussions and interactions between authors and conference attendees. Specifically, each presenter in an RI session will be presenting to a large audience of half the conference. Each of the six sessions will begin with a keynote presentation, selected from the highly rated contributed papers. Next, 21 papers will be presented back-to-back in a rapid three-minute format. In the subsequent interactive portion of the session, authors will further share their ideas and results through a digital poster session, with large monitors provided for each presenter to promote discussion and engagement with the audience. The six RI sessions are entitled Optimization and Optimal Control, Control of Energy and Automotive Systems, Predictive Control, Control of Robotic Systems, Learning, and Control of Biological and Aerospace Systems.

The conference will also feature five plenary seminars: three morning plenaries, as well as two evening plenaries on Tuesday and Wednesday, with diverse topics on control in science and engineering. The plenary programs commence with a plenary lecture on Control Challenges for the Laser Interferometer Gravitational-wave Observatory (LIGO), by Dennis Coyne, and wraps up with the Friday morning plenary by Eckman Award winner Na Li on Distributed Decision Making in Network Systems.

The 2020 ACC received 1239 paper submissions, 46 invited session proposals, 5 tutorial session proposals, and 11 pre-conference workshop proposals. After a tremendous and conscientious effort by the Society Review Chairs, the Associate Editors, and the Program Committee, together with the eleven auditors and all of the reviewers, 835 papers were selected for presentation at the conference, for an acceptance rate of 67%. In addition, 27 papers were nominated for the Student Best Paper Competition. This year the papers were reviewed in a double-blind process to reduce bias in evaluation. We encourage you to attend the Student Best Paper Session on Wednesday from 4-6 pm to hear the presentations of the five outstanding finalists for the award. Also, we encourage you to engage with the poster presenters in our Late-Breaking Results poster session, during the breaks throughout the conference.

The program was assembled in Atlanta in January, thanks to the dedication of Amir Aghdam, Santosh Devasia, Kam Leang, Ardalan Vahidi, George Chiu, Kristi Morgansen, Bonnie Ferri and Fumin Zhang, as well as the sacrifice of a large number of Post-Its. Amir's attention to detail is remarkable, and when he finally approved the program schedule, we all were confident that it was time to celebrate. The Operating Committee for the ACC has been dedicated and effective, and I appreciate their contributions to assemble all the critical pieces into the complex conference system. You can find their names in the final program and on the conference website. Please do thank them for their service when you see them online. I also gratefully acknowledge our General Chair Santosh Devasia for his leadership and vision, as well as his cheerfulness at all times.

Many thanks for your dedication to the 2020 American Control Conference, and enjoy the conference! *Martha Grover* 

#### GREETINGS FROM THE IFAC PRESIDENT

It is my great pleasure as president of the International Federation of Automatic Control (IFAC) to "welcome" you to the American Control Conference organized by the American Automatic Control Council (AACC) and co-sponsored by IFAC.

By now, it seems already standard that a welcome is independent of the location of the person "being welcomed" and the location of the person "welcoming" -- and it applies to a virtual meeting room, a virtual lecture or – you guessed it – a virtual conference. This welcome reaches you probably in an electronic version and you are not holding the usual ACC booklet in your hands. Most likely, this is one of the smaller changes that you witness when comparing this year's ACC to your past ACC experiences. The spread of the SARS-CoV-2 virus and the associated disease COVID-19 has turned many things upside down and radically changed how we participate in conferences - at least for the rest of the year and most probably way beyond. This statement is not based on my predictions on the future of the SARS-CoV-2 virus (I would not dare...), but based on my opinion that this pandemic brings lasting changes, some of which might even be for the better.

It is clear that seeing the current pandemic purely as a chance would not do justice to the many tragic losses and the restrictions we have to accept for our daily lives. No question, the spread of the SARS-CoV-2 virus is the worst disaster of worldwide impact that mankind has seen since many decades, and my greatest wish with all my heart is that you, your families and friends stay healthy. Let us try anyways to not only minimize the horrible consequences of this pandemic, but also to think beyond the crisis, actively shaping this change by envisioning a better and possibly more sustainable future.

Within IFAC, we certainly try to adapt this mindset and we are constantly thinking about change for the better of the community — especially in this difficult situation. Already the IFAC constitution states that IFAC's primary objective is to serve all those concerned with the theory and application of automatic control and systems engineering, wherever they are situated. A recent project in this respect is for example the initiative of the 'Corona Control Community Project (C3P) Website', a joint effort with IEEE CSS that you've probably already heard about (https://covid.ifac-control.org). Serving the community, of course, also includes our 'daily business': organizing and sponsoring more than 50 technical meetings every year, the publication of eight prestigious archival journals, recognizing great achievements and talent through IFAC Awards, promoting the benefits of automatic control among the public at large and many more initiatives that are carried out thanks to all the IFAC boards, committees and volunteers.

Finally, and most importantly, I want to thank the organizers of the American Control Conference, who have done a tremendous job in adapting to the difficult COVID-19 imposed circumstances in such a professional way. Even though, or maybe even because of the changes the spread of the SARS-CoV-2 virus forces on us, this ACC will be a new and exciting experience. Next to the technical program of high scientific level, it will certainly be a fruitful conference that inspires new ideas and sparks new collaborations, despite the difficult time the conference takes place in.

Last but not least, I wish us all interesting sessions, presentations and discussions, and I hope to meet many of you, at least virtually, in one or the other session over the next couple of days.

Frank Allgöwer

President of the International Federation of Automatic Control

### PLENARY SESSIONS

# Plenary Lecture

# Control Challenges for the Laser Interferometer Gravitational-Wave Observatory (LIGO)

# **Dennis Coyne**

California Institute of Technology, USA

Tuesday, June 30, 6:15 PM – 7:15 PM Ballroom 1

In September 2015, the Laser Interferometer Gravitational-wave Observatory (LIGO) initiated the era of gravitational wave astronomy (a new window on the universe) with the first direct detection of gravitational waves (ripples in the fabric of space-time) resulting from the merger of a pair of black holes into a single larger black hole. In August 2017 the LIGO and VIRGO collaborations announced the first direct detection of gravitational waves associated with a gamma ray burst and the electromagnetic emission (visible, infrared, radio) of the afterglow of a kilonova -- the spectacular collision of two neutron stars. This marks the beginning of multi-messenger astronomy. The kilonova discovery was made using the U.S.-based LIGO; the Europe-based Virgo detector; and 70 ground- and space-based observatories.

The Advanced LIGO gravitational wave detectors are second generation instruments designed and built for the two LIGO observatories in Hanford, WA and Livingston, LA. These two identically designed instruments employ coupled optical cavities in a specialized version of a Michelson interferometer with 4 kilometer long arms. Resonant optical cavities are used in the arms to increase the interaction time with a gravitational wave, power recycling is used to increase the effective laser power and signal recycling is used to improve the frequency response. In the most sensitive frequency region around 100 Hz, the displacement sensitivity is 10^-19 meters rms, or about 10 thousand times smaller than a proton. In order to achieve this unsurpassed measurement sensitivity Advanced LIGO employs a wide range of cuttingedge, high performance technologies, including an ultra-high vacuum system; an extremely stable laser source; multiple stages of active vibration isolation; super-polished and ion milled optics, high performance multi-layer dielectric coatings; wavefront sensing; active thermal compensation; very low noise analog and digital electronics; complex, nonlinear multi-input, multi-output control systems; a custom, scalable and easily re-configurable data acquisition and state control system; and squeezed light. The principles of operation, the numerous control challenges and future directions in control will be discussed.

More information is available at https://www.ligo.caltech.edu/

**Dennis Coyne** is the Chief Engineer for the LIGO Laboratory at the California Institute of Technology (Caltech) in Pasadena, California. Over the last 24 years he has led the LIGO engineering team's efforts in design and implementation of first and second generation instruments. The Laser Interferometer Gravitational-wave Observatory (LIGO) is a first of its kind instrument, capable of measuring the sub-atomic stretching of space due to cataclysmic cosmological events. The LIGO founders were awarded the Nobel Prize in Physics in 2017 for the direct detection of gravitational waves which were predicted by Albert Einstein. LIGO is now an operating observatory enabling multi-messenger astronomy. Prior to joining Caltech, Dennis worked for Kaman Sciences Corp. and Bell Laboratories. Dennis received a BSME from UMass and an MSME from UC Berkeley. He is a

fellow of the ASME, a fellow of the APS, recipient of the 2018 AAS Lancelot M. Berkeley Prize, OSA's 2016 Forman Team Engineering Excellence Award and the 2016 Breakthrough Prize in fundamental physics. More information is available at https://labcit.ligo.caltech.edu/~coyne/

# Plenary Lecture

# Lots to Be Done: Towards Data-Informed, Real-time Coordination Algorithms That Scale Up

## Sonia Martinez

University of California at San Diego

Wednesday, July 1, 8:00 AM – 9:00 AM Ballroom 1

Networked and robotic systems in emerging applications are required to operate safely, adaptively, and degrade gracefully while coordinating a large number of nodes. Distributed algorithms have consolidated as a means for robust coordination, overcoming the challenges imposed by the limited capabilities of each agent. However, plenty of problems still exist to break down the barriers of fast computation, make effective use of measured data, and understand large-scale limit effects. In this talk, I will present ongoing work in the control of infrastructure networks and large-swarm coordination, along with a discussion on modeling approaches, analysis tools, and architectural trade-offs going from small to large-sized robotic networks.

Sonia Martínez is a Professor at the Department of Mechanical and Aerospace Engineering at the University of California, San Diego. Prof. Martínez received her Ph.D. degree in Engineering Mathematics from the Universidad Carlos III de Madrid, Spain, in May 2002. Following a year as a Visiting Assistant Professor of Applied Mathematics at the Technical University of Catalonia, Spain, she obtained a Postdoctoral Fulbright Fellowship and held appointments at the Coordinated Science Laboratory of the University of Illinois, Urbana-Champaign during 2004, and the Center for Control, Dynamical systems and Computation (CCDC) of the University of California, Santa Barbara during 2005. From January 2006 to June 2010, she was an Assistant Professor with the department of Mechanical and Aerospace Engineering at the University of

California, San Diego. From July 2010 to June 2014, she was an Associate Professor with the Department of Mechanical and Aerospace Engineering at the University of California, San Diego.

Dr Martínez' research interests include networked control systems, multi-agent systems, and nonlinear control theory with applications to robotics and cyber-physical systems. In particular, she has focused on the modeling and control of robotic sensor networks, the development of distributed coordination algorithms for groups of autonomous vehicles, and the geometric control of mechanical systems. For her work on the control of underactuated mechanical systems she received the Best Student Paper award at the 2002 IEEE Conference on Decision and Control. She was the recipient of an NSF CAREER Award in 2007. For the paper "Motion coordination with Distributed Information," co-authored with Jorge Cortés and Francesco Bullo, she received the 2008 IEEE Control Systems outstanding paper award. She is a Senior Editor of the IEEE Transactions on Control of Networked Systems and an IEEE Fellow of the class of 2018.

# Plenary Lecture

# Advances and Opportunities of AI and Machine Learning in Industrial Process Monitoring and Control

Leo H. Chiang

Dow, Inc.

Wednesday, July 1, 6:15 PM – 7:15 PM Ballroom 1

To ensure safety, reliability, and productivity of industrial processes, artificial intelligence (AI) and machine learning techniques have been widely used in process industries for decades. The benefits of process monitoring and control are well documented and employed routinely in manufacturing. This talk will go over historical perspective and recent AI and machine learning successes in the areas of real-time analytics, deep learning, reinforcement learning, visualization, and feature engineering. Complex interaction between human decision and automated control will be discussed. Humans grow expertise by quickly adapting to abnormal conditions and using domain knowledge to generate creative solutions. However, reproducing human decisions across the enterprise is a challenge. A common misconception is that AI is to replace human decision. The talk will emphasize how AI and control systems must be complementary to make human decisions as efficient and consistent as possible. Human decision will remain a center piece of how to operate industrial processes in a safe, reliable, and productive manner.

**Leo H. Chiang** is Technology Director at Dow Inc., leading Chemometrics and AI implementations for Manufacturing. Leo has developed and implemented several data analytics techniques to solve complex manufacturing problems, resulting in 11 Dow Manufacturing Technology Center Awards. In 2016 he received the Dow R&D Excellence in Science Award in recognition of his scientific achievement in industrial research.

Leo has a B.S. degree from University of Wisconsin at Madison and M.S. and Ph.D. degrees from the University of Illinois at Urbana-Champaign, all in Chemical Engineering. Leo has contributed to over 40 externally refereed journal/proceedings papers and has given over 100 conference presentations and

university lectures. Leo has co-authored two books published by Springer Verlag. His textbook Fault Detection and Diagnosis in Industrial Systems is available in English and Chinese and has received over 2,100 citations according to Google Scholar.

Leo has a long history of supporting American Institute of Chemical Engineers (AIChE), having served as 2014-2016 Computing and Systems Technology (CAST) director, 2016 CAST 10E programming chair, 2017-2018 spring meeting program chair (MPC), and recently elected to serve the 2019-2022 Executive

Board of the Program Committee (EBPC). Leo was instrumental in setting up the Big Data Analytics Topical Conference (2015 to 2017) and Industry 4.0 Topical Conference (2018-2020) at the AIChE spring meeting. He was recognized by the AIChE with the 2016 Herbert Epstein Award for his leadership on Big Data Analytics technical programming and 2016 Computing Practice Award for his world-class leadership in the development and application of methodologies in analytics for batch and continuous processes known as Big Data.

Leo is also active in the broader engineering and control community, currently serves as 2019-2021 Computer Aids for Chemical Engineering (CACHE) trustee, 2021 International Symposium on Advanced Control of Chemical Processes (ADCHEM) industry co-chair, and 2022 American Control Conference (ACC) vice chair for industrial applications.

# Plenary Lecture

# Control of Complex Energy and Power Systems for Electrified Mobility

# **Andrew Alleyne**

University of Illinois, Urbana-Champaign

Thursday, July 2, 8:00 AM – 9:00 AM Ballroom 1

Electrification of mobility and transport is a global megatrend that has been underway for decades. The mobility sector encompasses cars, trucks, busses and aircraft. These systems exhibit complex interactions of multiple modes of power flow. These modes can be thermal, fluid, electrical, or mechanical. A key challenge in working across various modes of power flow is the widely varying time scales of the subsystems which makes centralized control efforts challenging. This talk will present a particular distributed controller architecture for managing the flow of power based on on-line optimization. A hierarchical approach allows for systems operating on different time scales to be coordinated in a controllable manner. It also allows for different dynamic decision making tools to be used at different levels of the hierarchy based on the needs of the physical systems under control. Additional advantages include the modularity and scalability inherent in the hierarchy. Additional modules can be added or removed without changing the basic approach.

In addition to the hierarchical control, a particularly useful graph-based approach will be introduced for the purpose of modeling the system interactions and performing early stage design optimization. The graph approach, like the hierarchy, has benefits of modularity and scalability along with being an efficient framework for representing systems of different time scales. The graph allows design optimization tools to be implemented and optimize the physical system design for the purpose of control. Recent results will be presented representing both generic interconnected complex systems as well as specific examples from the aerospace and automotive application domains.

Andrew Alleyne received his Mechanical and Aerospace Engineering B.S.E. from Princeton University in 1989. He received his M.S. and Ph.D. degrees in Mechanical Engineering in 1992 and 1994, respectively, from UC Berkeley. He joined the University of Illinois, Urbana-Champaign in 1994. He currently holds the Ralph M. and Catherine V. Fisher Professorship in the College of Engineering and is the Director for the NSF Engineering Research Center on Power Optimization for Electro-Thermal Systems (POETS). His research focuses on the modeling, simulation and control of nonlinear mechanical systems with a current focus on transient thermal systems. He developed a commercial simulation tool, ThermosysTM, for simulation of refrigeration

systems and worked with the Air Force Research Laboratory to develop the Aircraft Transient Thermal Modeling and Optimization (ATTMO) toolbox. His academic record includes supervision of over 80 M.S. and Ph.D. students and over 400 conference and journal publications. He is the recipient of an NSF CAREER award, has been an IEEE Distinguished Lecturer, and a National Research Council (NRC) Associate. He is a Fellow of IEEE and ASME. He has received the Gustus Larson Award, the Charles Stark Draper Award for Innovative Practice, The Yasundo Takahashi Education Award and the Henry Paynter Outstanding Investigator Award from ASME. The American Automatic Control Council awarded him the Control Engineering Practice Award. He was a Fulbright Fellow to the Netherlands and has held visiting Professorships at TU Delft, University of Colorado, ETH Zurich, and Johannes Kepler University. He has held several editorial positions for ASME, IEEE, and the International Federation of Automatic Control and been active in external advisory boards for universities, industry and government including the Scientific Advisory Board for the U.S. Air Force and the National Academies Board on Army Research and Development. He chaired the ASME Dynamic Systems and Controls Division and is a member of the IEEE Controls Systems Society Board of Governors. His record of campus service includes the Associate Dean for Research in the College of Engineering and the Associate Head for Undergraduate Programs in Mechanical Science and Engineering. In addition to research and service, he has a keen interest in education and has earned the UIUC College of Engineering Teaching Excellence Award, the UIUC Campus Award for Excellence in Undergraduate Education and the UIUC Campus Award for Excellence in Graduate Student Mentoring.

# Plenary Lecture

# Distributed Decision Making in Network Systems: Algorithms, Fundamental Limits, and Applications

# Na Li

Harvard University

Friday, July 3, 8:00 AM – 9:00 AM Ballroom 1

Recent radical evolution in distributed sensing, computation, communication, and actuation has fostered the emergence of cyber-physical network systems. Examples cut across a broad spectrum of engineering and societal fields. Regardless of the specific application, one central goal is to shape the network collective behavior through the design of admissible local decision-making algorithms. This is nontrivial due to various challenges such as the local connectivity, imperfect communication, model and environment uncertainty, and the complex intertwined physics and human interactions. In this talk, I will present our recent progress in formally advancing the systematic design of distributed coordination in network systems. We investigate the fundamental performance limit placed by these various challenges, design fast, efficient, and scalable algorithms to achieve (or approximate) the performance limits, and test and implement the algorithms on real-world applications.

Na Li is a Thomas D. Cabot associate professor in Electrical Engineering and Applied Mathematics of the J. Paulson School of Engineering and Applied Sciences at Harvard University. She received her Bachelor degree in Mathematics from Zhejiang University in 2007 and Ph.D. degree in Control and Dynamical systems from California Institute of Technology in 2013. She was a postdoctoral associate of the Laboratory for Information and Decision Systems at Massachusetts Institute of Technology 2013-2014. She has joined Harvard University since 2014. Her research lies in distributed learning, optimization, and control of cyber-physical networked systems. She received some paper awards, NSF career award (2016), AFSOR Young Investigator Award (2017), Harvard PSE Accelerator Award (2017), ONR Young Investigator Award (2019), Donald P. Eckman Award (2019).

KEYNOTE ADDRESSES ACC 2020

# RAPID INTERACTIVE KEYNOTE ADDRESSES

### Sandra Hirche

# Anticipating learning in stochastic optimal control

Authors: Alexandre Capone and Sandra Hirche

**Sandra Hirche** holds the TUM Liesel Beckmann Distinguished Professorship and heads the Chair of Information-oriented Control in the Faculty of Electrical and Computer Engineering at Technical University of Munich (TUM), Germany (since 2013). She

received the diploma engineer degree in Aeronautical and Aerospace Engineering in 2002 from the Technical University Berlin, Germany, and the Doctor of Engineering degree in Electrical and Computer Engineering in 2005 from the Technische Universität München, Munich, Germany. From 2005-2007 she has been a PostDoc Fellow of the Japanese Society for the Promotion of Science at the Fujita Laboratory at Tokyo Institute of Technology, Japan. Prior to her present appointment she has been an Associate Professor at TUM.

Her main research interests include learning, cooperaOve, and networked control with applicaOons in human-robot interacOon, mulO-robot systems, and general roboOcs. She has published more than 200 papers in internaOonal journals, books and refereed conferences. She has received mulOple awards such as the Rohde & Schwarz Award for her PhD thesis, the IFAC World Congress Best Poster Award in 2005 and – together with students – Best Paper Awards of IEEE WorldhapOcs and IFAC Conference of Manoeuvring and Control of Marine Crae in 2009 and the Outstanding Student Paper Award of the IEEE Conference on Decision and Control 2018. In 2013 she has been awarded with an ERC StarOng Grant on the "Control based on Human Models" and in 2019 with the ERC Consolidator Grant on "Safe data-driven control for human-centric systems". She has just been elevated to IEEE Fellow.

# Alexander Dowling Making Money in Energy Markets: Probabilistic Forecasting and Stochastic Programming Paradigms

Authors: Xian Gao and Alexander W. Dowling

**Alexander W. Dowling** is an Assistant Professor in Chemical and Biomolecular Engineering at the University of Notre Dame (Indiana, USA). His research combines

chemical engineering, computational optimization, and uncertainty quantification to enable principled molecular-to-systems engineering of sustainable energy and environmental technologies. Applications areas include energy markets and infrastructure, carbon sequestration, shale gas utilization, and advanced separations (membranes, ionic liquids). Prof. Dowling was recently honored with an NSF CAREER award (2020) to develop new novel Bayesian hybrid modeling paradigms for optimization and uncertainty quantification. Ongoing collaborative projects include the Institute for Advanced Design of Energy Systems (IDAES – DOE), Carbon Capture Simulation for Industrial Impact (CCSI2 – DOE) and Center for Innovative and Strategic Transformation of Alkane Resources (CISTAR – NSF). Prof. Dowling holds a B.S.E from the University of Michigan – Ann Arbor and Ph.D. from Carnegie Mellon University, all in chemical engineering. More information: dowlinglab.nd.edu.

# Demetris Coleman Backstepping Control of Gliding Robotic Fish for Trajectory Tracking in 3D Space

Authors: Demetris Coleman and Xiaobo Tan

**Demetris Coleman** is a PhD student in the Department of Electrical and Computer Engineering at Michigan State University. He earned bachelor's degrees in applied math and science from Berea College (2017) and in electrical engineering from Auburn University (2017), during which time he was inducted into the IEEE Eta Kapp Nu honor

society and the Mortar Board honor society. His dissertation research is focused on control of underwater vehicles.

# Helen Durand Delaying Cyberattack Impacts Using Lyapunov-Based Economic Model Predictive Control

Authors: Helen Durand and Matthew Wegener

**Helen Durand** is an Assistant Professor in the Department of Chemical Engineering and Materials Science at Wayne State University. She received her B.S. in Chemical

Engineering from UCLA, and upon graduation joined the Materials & Processes Engineering Department as an engineer at Aerojet Rocketdyne for two and a half years. She earned her M.S. in Chemical Engineering from UCLA in 2014 and her Ph.D. in Chemical Engineering from UCLA in 2017, and subsequently started at Wayne State. She received the Air Force Office of Scientific Research Young Investigator award, and her work has also received support from the National Science Foundation. She received a Faculty Research Excellence Award within the College of Engineering at Wayne State University and is serving as the Next-Gen Manufacturing Sessions Area Chair for the 2020 Annual Meeting of the American Institute of Chemical Engineers. Her research interests are in the area of process systems engineering with a focus on process control.

# Fumin Zhang

# Optimal Real-time Scheduling of Human Attention for a Human and Multi-Robot Collaboration System

Authors: Ningshi Yao and Fumin Zhang

**Fumin Zhang** is Professor in the School of Electrical and Computer Engineering at the Georgia Institute of Technology. He received the B.S. and M.S. degrees from Tsinghua University, Beijing, China, in 1995 and 1998, respectively. He received a PhD degree in

2004 from the University of Maryland (College Park) in Electrical Engineering, and held a postdoctoral position in Princeton University from 2004 to 2007. His research interests include mobile sensor networks, maritime robotics, control systems, and theoretical foundations for cyber-physical systems. He received the NSF CAREER Award in September 2009 and the ONR Young Investigator Program Award in April 2010. He is currently serving as the co-chair for the IEEE RAS Technical Committee on Marine Robotics, associate editors for IEEE Journal of Oceanic Engineering, Robotics and Automation Letters, IEEE Transactions on Automatic Control, and IEEE Transactions on Control of Networked Systems.

KEYNOTE ADDRESSES ACC 2020

# Yancy Diaz-Mercado Multi-Agent Control Using Coverage Over Time-Varying Domains

Authors: Xiaotian Xu and Yancy Diaz-Mercado

**Yancy Diaz-Mercado** earned a Ph.D. degree in Electrical Engineering from the Georgia Institute of Technology in 2016, and a M.S. degree in Electrical Engineering from the

same institution in 2014. In 2011, he graduated with a B.S. degree in Electrical Engineering from the University of Puerto Rico at Mayaguez. In fall 2016, he became a senior professional engineer in the Advanced Concept Section of the Air and Missile Defense Sector at the Johns Hopkins University Applied Physics Laboratory. In fall 2018, he joined the faculty of the Department of Mechanical Engineering at the University of Maryland, College Park as an Assistant Professor. He is a member of the Maryland Robotics Center, and the director of Collaborative Controls and Robotics Laboratory. His research interests include the development of collaborative autonomy for multi-agent systems and facilitating human-robot swarm interactions using control theory. Park) in Electrical Engineering, and held a postdoctoral position in Princeton.

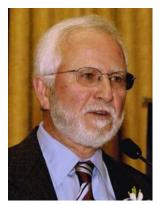

# **AACC AWARDS**

The American Automatic Control Council sponsors five awards. These awards are given to recognize excellence in scientific, technological, or educational contributions to automatic control. Congratulations to this year's winners!

# Richard E. Bellman Control Heritage Award A. Galip Ulsoy, University of Michigan

Citation: For seminal research contributions with industrial impact in the dynamics and control of mechanical systems especially manufacturing systems and automotive systems

**A.** Galip Ulsoy is the C.D. Mote, Jr. Distinguished University Professor Emeritus of Mechanical Engineering (ME) and the William Clay Ford Professor Emeritus of Manufacturing at University of Michigan (UM), Ann Arbor, where he served as the ME Department Chair, Deputy Director of the National Science Foundation (NSF) Engineering Research Center for Reconfigurable Manufacturing Systems, and the Director of the USA Army Ground Robotics Reliability Center. He also served as Director of Civil and Mechanical Systems at NSF and the President of the American Automatic Control Council (AACC). He received the Ph.D. from University of California at Berkeley (1979), the M.S. degree from Cornell University (1975), and the B.S. degree from Swarthmore College (1973). His research interests are in the dynamics and control of mechanical systems, and he has published 4 books, holds 3 patents, and has

published over 300 journal and conference papers. His work is highly-cited and has had major impact in industry. He has received numerous awards, including the AACC 1993 O. Hugo Schuck Best Paper Award, the 2003 and 2016 Rudolf Kalman Best Paper Awards from the J. Dynamic Systems, Measurement and Control, the 2008 Albert M. Sargent Progress Award from the Society of Manufacturing Engineers (SME), the 2008 Rufus T. Oldenburger Medal, the 2013 Charles Russ Richards Award from the American Society of Mechanical Engineers (ASME) and the 2014 Hideo Hanafusa Outstanding Investigator Award in Flexible Automation. He is a member of the USA National Academy of Engineering, received the 2012 Presidential Special Award from the Scientific and Technological Research Council of Turkey, and is a Fellow of ASME, SME, IEEE and the International Federation of Automatic Control (IFAC).

# John R. Ragazzini Education Award Naomi Leonard, Princeton University

Citation: For outstanding contributions to control education through dedicated mentoring of undergraduate and graduate students, integration of research and education, and innovative curriculum development combining engineering and the arts.

Naomi Ehrich Leonard is the Edwin S. Wilsey Professor of Mechanical and Aerospace Engineering and Associated Faculty in the Program in Applied and Computational Mathematics at Princeton University. She is Director of Princeton's Council on Science and Technology and affiliated faculty member of the Princeton Neuroscience Institute and Program on Quantitative and Computational Biology. Leonard is a MacArthur Fellow, a member of the American Academy of Arts and Sciences, and Fellow of the IEEE, ASME, SIAM, and IFAC. She is Editor of the Annual Review of Control, Robotics, and Autonomous Systems. Previously, she was Senior Editor of IEEE Transactions on Control of Network Systems, Associate Editor of Automatica, and Associate

Editor of SIAM Journal on Control and Optimization. She received the Hendrik W. Bode Lecture Prize (IEEE CSS, 2017), the Nyquist Lecture Award (ASME DSCD, 2014), and the Automatica Prize Paper Award (IFAC). She has also given plenary lectures at the SIAM Annual Meeting, IFAC World Congress, American Control Conference, and IEEE Conference on Robotics and Automation (ICRA).

Leonard received the B.S.E. degree in Mechanical Engineering from Princeton University in 1985 and the M.S. and Ph.D. degrees in Electrical Engineering from the University of Maryland in 1991 and 1994. From 1985 to 1989, she worked as an engineer in the electric power industry. Her current interests include decentralized control and decision making of dynamical systems on networks, autonomous vehicle and mobile robotic teams, collective animal behavior, human cognitive control, and intersections with dance. She led a multidisciplinary project that culminated in 2006 in a major field demonstration in Monterey Bay, CA of a first-of-its-kind automated and adaptive ocean observing system, featuring a coordinated network of autonomous underwater vehicles collecting data about the ocean.

# Control Engineering Practice Award Leo H. Chiang, The Dow Chemical Company

Citation: For the application of advanced data-driven algorithms for fault detection, fault diagnosis, and control in the chemical process industry

**Leo H. Chiang** is Technology Director at Dow Inc., leading Chemometrics and AI implementations for Manufacturing. Leo has developed and implemented several data analytics techniques to solve complex manufacturing problems, resulting in 11 Dow Manufacturing Technology Center Awards. In 2016 he received the Dow R&D Excellence in Science Award in recognition of his scientific achievement in industrial research.

Leo has a B.S. degree from University of Wisconsin at Madison and M.S. and Ph.D. degrees from the University of Illinois at Urbana-Champaign, all in Chemical Engineering. Leo has contributed to over 40 externally refereed

journal/proceedings papers and has given over 100 conference presentations and university lectures. Leo has co-authored two books published by Springer Verlag. His textbook Fault Detection and Diagnosis in Industrial Systems is available in English and Chinese and has received over 2,100 citations according to Google Scholar.

Leo has a long history of supporting American Institute of Chemical Engineers (AIChE), having served as 2014-2016 Computing and Systems Technology (CAST) director, 2016 CAST 10E programming chair, 2017-2018 spring meeting program chair (MPC), and recently elected to serve the 2019-2022 Executive Board of the Program Committee (EBPC). Leo was instrumental in setting up the Big Data Analytics Topical Conference (2015 to 2017) and Industry 4.0 Topical Conference (2018-2020) at the AIChE spring meeting. He was recognized by the AIChE with the 2016 Herbert Epstein Award for his leadership on Big Data Analytics technical programming and 2016 Computing Practice Award for his world-class leadership in the development and application of methodologies in analytics for batch and continuous processes known as Big Data.

Leo is also active in the broader engineering and control community, currently serves as 2019-2021 Computer Aids for Chemical Engineering (CACHE) trustee, 2021 International Symposium on Advanced Control of Chemical Processes (ADCHEM) industry co-chair, and 2022 American Control Conference (ACC) vice chair for industrial applications.

# Donald P. Eckman Award Samuel Coogan, Georgia Institute of Technology

Citation: For outstanding contributions to formal methods for control of autonomous systems with applications to transportation systems

Sam Coogan is an assistant professor at Georgia Tech with a joint appointment in the School of Electrical and Computer Engineering and the School of Civil and Environmental Engineering. He currently holds the Demetrius T. Paris Junior Professorship in the School of ECE. Prior to joining Georgia Tech in 2017, he was an assistant professor in the Electrical Engineering Department at UCLA from 2015 to 2017. He received the B.S. degree in Electrical Engineering from Georgia Tech and the M.S. and Ph.D. degrees in Electrical Engineering from the University of California, Berkeley. His research is in the area of dynamical systems and autonomy and focuses on developing scalable tools for verification and control of networked, cyber-physical systems with an emphasis on transportation systems. He received a Young Investigator Award from the Air Force Office of Scientific Research in 2018, a CAREER Award from the

National Science Foundation in 2018, the IEEE Transactions on Control of Network Systems Outstanding Paper Award in 2017, and the best student paper award at the 2015 Hybrid Systems: Computation and Control conference.

# O. Hugo Schuck Best Paper Awards: Theory Junjie Qin, Sen Li, Kameshwar Poolla, and Pravin Varaiya

"Distributed Storage Investment in Power Networks"

Junjie Qin is a postdoctoral researcher at UC Berkeley, working with Prof. Kameshwar Poolla and Prof. Pravin Varaiya. He received a Bachelor of Engineering degree in Hydraulic and Hydropower Engineering and a Bachelor of Economics degree from Tsinghua University, Beijing, China. He obtained a Ph.D. degree in Computational and Mathematical Engineering (2018) from Stanford University, where he also received a M.S. degree in Civil and Environmental Engineering (2011) and a M.S. degree in Statistics (2017). His research interests include electric energy systems and transportation networks. He is a recipient of the Satre family fellowship on energy and

sustainability and a finalist for the Best Student Paper Award at the 55th IEEE Conference on Decision and Control 2016.

Sen Li is an Assistant Professor of the Department of Civil and Environmental Engineering at The Hong Kong University of Science and Technology. Between 2017-2019, he was a postdoctoral fellow at The University of California, Berkeley, working with Prof. Kameshwar Poolla and Prof. Pravin Varaiya. He received his B.S. from Zhejiang University, and Ph.D. from The Ohio State University. Previously, he was an intern at the Pacific Northwestern National Laboratory, and a visiting student at Harvard University. Dr. Li's research interest lies in the intersection of control, optimization and game theory with applications in the smart city. He is particularly interested in renewable

energy integration and intelligent transportation systems. He is a finalist of Best Student Paper Award at 2018 European Control Conference.

Kameshwar Poolla is the Cadence Distinguished Professor at UC Berkeley in EECS and ME. His current research interests include many aspects of future energy systems including economics, security, and commercialization. He served as the Founding Director of the IMPACT Center for Integrated Circuit manufacturing. Dr. Poolla cofounded OnWafer Technologies which was acquired by KLA-Tencor in 2007. He has served as a technology and mergers/acquisitions consultant for Cadence Design Systems. Dr. Poolla has been awarded a 1988 NSF Presidential Young Investigator Award, the 1993 Hugo Schuck Best Paper Prize, the 1994 Donald P. Eckman Award, the 1998 Distinguished Teaching Award of the University of California, the 2005 and 2007 IEEE

Transactions on Semiconductor Manufacturing Best Paper Prizes, and the 2009 IEEE CSS Transition to Practice Award.

**Pravin Varaiya** is a Professor of the Graduate School in the Department of Electrical Engineering and Computer Sciences at the University of California, Berkeley. He has been a Visiting Professor at the Institute for Advanced Study at the Hong Kong University of Science and Technology since 2010. He has coauthored four books and 350+ articles. His current research is devoted to electric energy systems and transportation networks. Varaiya has held a Guggenheim Fellowship and a Miller Research Professorship. He has received three honorary

doctorates, the Richard E. Bellman Control Heritage Award, the Field Medal and Bode Lecture Prize of the IEEE Control Systems Society, and the Outstanding Researcher Award of the IEEE Intelligent Transportation Systems Society. He is a Fellow of IEEE, a Fellow of IFAC, a member of the National Academy of Engineering, and a Fellow of the American Academy of Arts and Sciences.

# O. Hugo Schuck Best Paper Awards: Application Chao Ning and Fengqi You

"Data-Driven Adaptive Robust Optimization Framework for Unit Commitment under Renewable Energy Generation Uncertainty"

**Chao Ning** received the B.Eng. degree in Automation from University of Electronic Science and Technology of China in 2012, and M.S. degree in Control Science and Engineering from Tsinghua University, China, in 2015. He is currently working toward the Ph.D. degree at Cornell University, USA. His research interests include data-driven optimization under uncertainty, learning for dynamics and control, big data analytics and machine learning, power systems operations, and renewable energy systems.

**Fengqi You** is the Roxanne E. and Michael J. Zak Professor at Cornell University (Ithaca, New York), and is affiliated with the Graduate Fields of Chemical Engineering, Electrical and Computer Engineering, Operations Research and Information Engineering, Systems Engineering, Mechanical Engineering, Civil and Environmental Engineering, and Applied Mathematics. He also serves as Chair of Cornell Systems Engineering PhD Studies and Associate Director of Cornell Energy Systems Institute.

He earned a B.Eng. from Tsinghua University and received his Ph.D. from Carnegie Mellon University. Fengqi was on the faculty of Northwestern University from 2011 to 2016, and worked at Argonne National Laboratory as an Argonne Scholar from 2009 to 2011. He has published more than 150 peer-reviewed journal articles, and has an h-index of 57. Some of his research results have been editorially highlighted in Science and Nature, featured on multiple journal covers, and reported by major media outlets (e.g. The New York Times, BBC, BusinessWeek, and National Geographic). His recent awards include an NSF CAREER Award, W. Curtis McGraw Research Award from ASEE, Cornell Engineering Research Excellence Award, and ACS Sustainable Chemistry & Engineering Lectureship Award, as well as W. David Smith, Jr. Publication Award, Sustainable Engineering Research Excellence Award, Environmental Division Early Career Award, Computing and Systems Technology (CAST) Outstanding Young Researcher Award, and Excellence in Process Development Research Award from AIChE. He is currently an Editor of Computers & Chemical Engineering, an Associate Editor of AAAS Journal Science Advances, a Consulting Editor of AIChE Journal, and an editorial board member of several other journals. His research focuses on novel computational models, optimization algorithms, statistical machine learning methods, and multi-scale systems analytics tools for smart manufacturing, digital agriculture, energy systems, and sustainability. For more information about his research group: www.peese.org.

## **CONFERENCE INFORMATION**

#### REGISTRATION

All conference attendees **must register**. Access to the online sessions will be available through Paperplaza based on registration. Registration-related questions during conference should be directed to either

- the ACC 2020 Slack workspace's #registrationdesk channel (monitored periodically between 8:00am-6:00pm Mountain Daylight Time), or
- the Registration Chair via <a href="mailto:acc2020.reg@gmail.com">acc2020.reg@gmail.com</a>

Due to the transition to online, all registration fees have been substantially reduced and additional student registration support has been made available. Paper and poster upload and publication in the conference proceedings for authors is available only with Member and Non-Member registration; up to 4 papers and 2 posters can be uploaded for each registration.

Registration fees are shown in the table below. Registrants who are members of any of the American Automatic Control Council Societies (AIAA, AIChE, ASCE, ASME, IEEE, INFORMS APS, ISA, SCS and SIAM) may register at the Member rate. Receipts will be provided electronically around the time of the conference.

Registration Categories	Registration Fee	Paper/Poster Upload	Proceedings (via Paperplaza)	Conference Banquet
Member	\$150	Included	Included	N/A
Non-Member	\$250	Included	Included	N/A
Student/Retiree	\$75	Not included	Included	N/A
One day registration	N/A	N/A	N/A	N/A

Workshop registration fees are shown in the table below.

Registration	Registration		
Categories	Regular	Student/Retiree	
Two day workshop	N/A	N/A	
Full day workshop	\$120	\$60	
Half day workshop	\$120	\$60	

#### **EXHIBITS**

Please take time during the conference to visit our exhibitors through the Zoom links listed in the online program on the ACC 2020 website.

#### **COFFEE BREAKS**

Coffee breaks will be held 9:00 AM - 9:30 AM and 3:30 PM - 4:00 PM on Wednesday, Thursday and Friday in the through the scheduled Zoom links provided in the online program on the ACC 2020 website.

#### **PLENARY SESSIONS**

Morning plenaries will be held 8:00 AM - 9:00 AM on Wednesday, Thursday, and Friday in Ballroom 1. Evening plenaries will be held 6:15 PM - 7:15 PM on Tuesday and Wednesday, in Ballroom 1.

#### RAPID INTERACTIVE SESSIONS

Rapid Interactive Sessions will be held 9:30 AM – 11:45 AM on Wednesday, Thursday, and Friday in Ballroom 1 and in Ballroom 2.

#### **LATE-BREAKING POSTER SESSIONS**

Late-breaking poster sessions will be held 9:00 AM – 9:30 AM on Wednesday, Thursday, and Friday in Ballroom 1.

## **AWARDS CEREMONY**

All conference attendees are encouraged to attend the announcement of the annual ACC awards on Friday, July 3, 12:00 PM-1:30 PM, in Ballroom 1. Come celebrate accomplishments in our field!

#### VIRTUAL SESSIONS/COMMUNICATION: ZOOM AND SLACK

ACC 2020 will be hosted through the platform Zoom (<a href="https://zoom.us">https://zoom.us</a>). Links to appropriate meeting room links are available through the online program found on the ACC website. For the best experience, attendees are encouraged to sign up for an account and familiarize themselves with Zoom. Tutorials can be found here: <a href="https://support.zoom.us/hc/en-us/articles/206618765-Zoom-Video-Tutorials">https://support.zoom.us/hc/en-us/articles/206618765-Zoom-Video-Tutorials</a>.

A Slack workspace has been set up for the conference. Conference updates and announcements will be made through a Slack workspace. Sign up for the workspace at

https://join.slack.com/t/acc-2020/shared\_invite/zt-eg7cxcc1-l9SyE3vM4z~ZK2tEbxFhdA. Tutorials are available at: https://slack.com/resources/slack-101.

Please feel free to take advantage of the workspace for conversations and to share information.

#### **LOCAL INFORMATION**

ACC 2020 was originally planned to take place in Denver. However, due to the impact of COVID-19, the conference will be fully online. If in the future you have an interest in traveling, do visit Denver! Denver is the capital city of Colorado with landmark 19<sup>th</sup>-century buildings and roots that date back to the Old West era. Located just east of the Front Range of the Rocky Mountains, the city's elevation of 5280 feet above sea level has earned it the nickname the Mile High City. Denver is known for sweeping views and easy access to the outdoors. In addition to the wide variety of available outdoor activities, Denver's downtown offers museums, art galleries, live music shows, water parks, restaurants and craft breweries for visitors to enjoy. Getting around downtown is easy through the free 16th Street Mall shuttle. Visit Larimer Square and the renovated Denver Union Station in historic Lower Downtown features restaurants, galleries, shops, bars, brewpubs and coffee houses. Denver Pavilions consist of shops, restaurants, bars and a movie theater.

**Local Attractions**: The Brookings Institution ranks Denver is one of the most walkable downtowns in the nation. A free shuttle bus on the 16th Street Mall is available for your convenience. Some popular places to visit include Union Station and the LoDo Historic District. You can stand 5,280 feet above sea level (one mile high!) on the west steps of the Colorado State Capitol, where a quick climb to the rotunda affords you panoramic views of snowcapped peaks to the west. Free tours are available on weekdays.

Other attractions include the Elitch Gardens Theme and Water Park and the family-owned Lakeside Amusement Park that's great for all ages. The legendary Coors Brewery in nearby Golden hosts 30-minute, self-paced tours of the brewhouse, malthouse and packaging complex. Their you'll see firsthand how more than 100 work teams make some of the most popular beer in the world. The Denver Zoo is an 80-acre zoological garden located in City Park of Denver, approximately three miles from the downtown. The Denver Zoo is the most popular paid attraction in the Denver metropolitan area, and it houses species from all over the world, including hoofed mammals, carnivorous mammals, primates, pachyderms, birds, reptiles, and fish. Laid out in a large loop, with exhibits both inside and outside the loop, the zoo's animal collection contains 3,500 specimens representing 550 unique species. For more attractions, please visit <a href="https://www.denver.org">https://www.denver.org</a>.

**Museums**: Less than a 10-minute walk from the Sheraton Hotel is the Denver Art Museum. The museum is made up of two architecturally stunning buildings – one a fortress-like structure from Italian architect Gio Ponti, the other, a structure that resembles a titanium crystal with peaks and shards designed by Daniel Libeskind. Inside, find the world's greatest collection of Native American art and 68,000 other art objects, including works from European masters, Old West classics and phenomenal traveling exhibits. Within three miles of downtown, the Denver Museum of Nature & Science is a municipal natural history and science museum. A variety of exhibitions, programs, and activities help museum visitors learn about the natural history of Colorado, Earth, and the universe. The 716,000-square-foot (66,519 m²) building houses more than one million objects in its collections including natural history and anthropological materials, as well as archival and library resources.

**Dining**: Home to award-winning chefs and restaurateurs, Denver has emerged as one of the top dining locations in the country. Denver's local culinary scene is thriving, offering everything from farm-to-table bistros to classic steakhouses to historic Denver restaurants. Whether downtown on the 16th Street Mall or looking for a unique spot in Cherry Creek, visitors have a variety of great options to choose from. For example, some local favorites include Tavernetta, Jax Fish house in Lower Downtown, the Family Jones

Spirit House, Citizen Rail, Annette, El Five, Guard and Grace, to name a few. For families, the 12,000-square-foot gastohall, located in the hip River North Art District (RiNo), offers 10 stands vending everything from cheeseburgers and spaghetti to wood-fire pizzas, hand-crafted chocolates, sugar-studded pastries and Italian beef sandwiches. Complete with an ice cream shop, a coffeehouse, butcher shop, fish counter and bar that slings progressive cocktails (and mocktails), the Denver Central Market is headlined with foodstuffs to appease all age groups and every culinary persuasion. Each of the vendors has its own seating area, but the communal dining space—the market's focal point—is where everyone seems to congregate; there's a big-screen TV, too, that showcases sporting events. For more ideas on where to dine in Denver, see https://www.denver.org/restaurants/denver-dining/

## **EXHIBITORS AND SPONSORS**

ACC 2020 thanks all of our sponsors for their generous support of our conference. Many of our sponsors will have exhibits at ACC 2020 that we encourage everyone to visit. Exhibits will be open, and links to Zoom virtual meeting rooms and Slack channels for you to interact with exhibitors will be provided in the online program on the ACC 2020 website. Please note that several of the Gold Sponsors are holding sponsored sessions, as listed in the Special Sessions section of the program.

# **GOLD SPONSORS**

#### General Motors Co.

We envision a future of zero crashes, zero emissions and zero congestion, and we have committed ourselves to leading the way toward this future. General Motors has been

GENERAL MOTORS

pushing the limits of transportation and technology for over 100 years. Today, we are in the midst of a transportation revolution. And we have the ambition, the talent and the technology to realize the safer, better and more sustainable world we want. As an open, inclusive company, we're also creating an environment where everyone feels welcomed and valued for who they are. One team, where all ideas are considered and heard, where everyone can contribute to their fullest potential, with a culture based in respect, integrity, accountability and equality. Our team brings wide-ranging perspectives and experiences to solving the complex transportation challenges of today and tomorrow. At General Motors, innovation is our north star. As the first automotive company to mass-produce an affordable electric car, and the first to develop an electric starter and air bags, GM has always pushed the limits of engineering. We are General Motors. We transformed how the world moved through the last century. And we're determined to do it again as we redefine mobility to serve our customers and shareholders and solve societal challenges.

#### **MathWorks**

The MATLAB and Simulink product families are fundamental applied math and computational tools at the world's educational institutions. Adopted by more than 5000 universities and colleges, MathWorks products

accelerate the pace of learning, teaching, and research in engineering and science. MathWorks products also help prepare students for careers in industry worldwide, where the tools are widely used for data analysis, mathematical modeling, and algorithm development in collaborative research and new product development. Application areas include data analytics, mechatronics, communication systems, image processing, computational finance, and computational biology.

# Mitsubishi Electric Research Laboratory

Mitsubishi Electric Research Laboratory (MERL), located in Cambridge, MA, is the North American R&D organization for Mitsubishi Electric Corporation, a \$40B global manufacturer of electrical products including elevator and escalators, HVAC

systems, electrical power systems, satellites, factory automation equipment, automotive electronics and visual information systems. Controls researchers at MERL collaborate with corporate R&D

laboratories, business units in Japan and academic partners around the world to develop new control algorithms and control technologies that extend the performance envelope of these systems.

For students who are interested in pursuing an exciting summer of research, please check out our internship program and learn more at facebook, google, or @MERL news.

- MERL interns work closely with top researchers, and gain valuable industry experience an impressive 1:1 intern to researcher ratio.
- Internships are expected to lead to publications in major conferences and journals.
- We offer competitive compensation and relocation assistance.
- Boston is a fantastic student-oriented city, home to some of the best universities in the world.

The summer season is especially lively as MERL and Boston are teeming with interns and visitors from all over the world.

## SILVER SPONSORS

#### **dSPACE**

dSPACE offers universities and research institutions flexible systems that provide all the options necessary for the model-based development of mechatronic controllers in an academic environment. From architecture-based system design and block-diagram-based

function prototyping to automatic production code generation and hardware-in-the-loop (HIL) tests, dSPACE products are successfully being used in the classroom and in research projects at internationally renowned universities. To actively support high-end research at universities and the high-quality education of young talents, dSPACE offers its hardware and software products in special kits for universities at a very attractive price. Learn more at dspaceinc.com / offers for universities.

#### Quanser

Quanser is the world leader in mechatronics, robotics, and control platforms optimized for the academic setting. Our leadership in producing innovative lab solutions makes us a trusted partner with academic

institutions to help strengthen their reputation with transformative research and teaching labs. The Quanser approach of innovation, collaboration and education has produced a number of notable technology firsts that pioneered many critical contemporary trends, including efficient validation platform for control research, and high-performance real-time control on common microcomputers.

#### **SIAM**

SIAM publishes textbooks and monographs in print and electronic format. Visit our booth to browse new and bestselling titles, all available at discounted

conference pricing. If you're interested in writing a book, an editor is available to explain how SIAM partners with authors to publish books of outstanding quality and accessible pricing. More info: <a href="https://www.siam.org/Publications/Books">https://www.siam.org/Publications/Books</a>

# **Springer Nature**

At Springer Nature, our aim is to advance discovery. For over 175 years, we've dedicated ourselves to the academic community, creating value across the publishing process. We deliver

# **SPRINGER NATURE**

an unmatched breadth and depth of quality information which spans top research publications (Nature), outstanding scientific journalism (Scientific American), highly specialized subject-specific journals across all the sciences and humanities, professional publications, databases, and the most comprehensive portfolio of academic books. We use our position and our influence to champion the issues that matter most to the research community – standing up for science, taking a leading role in open research, and being powerful advocates for the highest quality and ethical standards in research.

## **BRONZE SPONSORS**

#### Halliburton

# **HALLIBURTON**

Founded in 1919, Halliburton is one of the world's

largest providers of products and services to the energy industry. With 60,000 employees, representing 140 nationalities in more than 80 countries, the company helps its customers maximize value throughout the lifecycle of the reservoir – from locating hydrocarbons and managing geological data, to drilling and formation evaluation, well construction and completion, and optimizing production throughout the life of the asset. Halliburton's technology organization provides cutting edge research and innovative solutions to maximize asset value for our customers.

#### **Processes**

Processes (ISSN 2227-9717) provides an advanced forum for process/systems related research in chemistry, biology, materials and allied engineering fields. The journal publishes

regular research papers, communications, letters, short notes and reviews. Our aim is to encourage researchers to publish their experimental, theoretical and computational results in as much detail as necessary. There is no restriction on paper length or number of figures and tables.

- Experimental, theoretical and computational research on process development and engineering
- Chemical and biochemical reaction processes
- Mass transfer, separation and purification processes
- Mixing, fluid processing and heat transfer systems
- Integrated process design and scaleup
- Process modeling, simulation, optimization and control

SPECIAL SESSIONS ACC 2020

## **SPECIAL SESSIONS**

In addition to the main technical program, the conference includes lunch-time and afternoon special sessions on industry, education, emerging topics, and funding opportunities.

#### WEDNESDAY NOON SPECIAL SESSIONS

# **An Overview of NSF Programs**

**Sponsor:** National Science Foundation

**Time:** 12:00PM – 1:30 PM, Wednesday, July 1, 2020

**Location:** Denver

**Organizer:** Dr. Irina Dolinskaya

The National Science Foundation (NSF) offers a number of funding opportunities for investigators working in the field of controls, both within the disciplinary programs in Engineering and other directorates, and through cross-cutting initiatives that are foundation-wide. This presentation will describe opportunities that are relevant to the robotics, dynamics and controls communities. The presentation will also describe programs targeted toward junior investigators, as well as guidelines for proposal preparation and NSF's Intellectual Merit and Broader Impacts criteria. Question-and-answer session will follow the presentation.

#### **Speakers:**

**Dr. Kishan Baheti** handles the areas of Control and Sensor Networks in the Power, Controls and Adaptive Networks (PCAN) Program in ECS. Dr. Baheti received the B.S. and M.S. in Electrical Engineering in India from VRCE Nagpur, and from BITS Pilani, respectively. In 1970, he came to USA and received M.S. in Information and Computer Science from University of Oklahoma and Ph.D. in Electrical and Computer Engineering from Oregon State University. In 1976, Dr. Baheti joined the Control Engineering Laboratory of GE Corporate Research and Development Center in Schenectady, NY. His work focused on advanced multivariable control for jet engines, signal and image

processing systems, computer- aided control system design, vision-based robots for precision welding, model-based fault identification and parallel implementation of Kalman filters. Dr. Baheti and his colleagues received IR-100 award for robotic welding vision system. He has organized a series of educational workshops for GE engineers that resulted in innovative product developments and contributed to enhance university collaborations with GE business divisions. In 1989, Dr.Baheti joined NSF as a Program Director in the Division of Electrical and Communications Systems. His contributions include the development of NSF initiatives on "Combined Research and Curriculum Development", "Semiconductor Manufacturing", and NSF/EPRI Initiative on "Intelligent Control". He was instrumental in the development of NSF Initiative on "Research Experience for Teachers" to involve middle and high school teachers in engineering research that can be transferred to pre-college classrooms. Recently he is involved in networked control systems, sensor and actuator networks, imaging and computational video, micro and nano systems, medical robotics, science of learning, and dynamics and control of biological and medical systems. He has served as associate editor for IEEE Transactions on Automatic Control, member of the Control Systems Board of Governors, chair for Public Information Committee, and awards chair for the American Automatic

SPECIAL SESSIONS ACC 2020

Control Council (AACC). He received "Distinguished Member Award" from the IEEE Control Systems Society. In 1997, he was elected a Fellow of IEEE.

**Dr. Jordan Berg** is Program Director in the Division of Civil, Mechanical, and Manufacturing Innovation (CMMI), in the Engineering Directorate (ENG) of the US National Science Foundation (NSF). He is Emeritus Professor of Mechanical Engineering at Texas Tech University, where he served as Co-Director of the Nano Tech Center, and Associate Director of the DISCO (Dynamic Intelligent Systems, Control and Optimization) group. His research interests are in mechatronics, nonlinear control, and robotics. He received B.S.E. and M.S.E. degrees in Mechanical and Aerospace Engineering from Princeton University in 1981 and 1984, respectively. For several years

he was an Attitude Control Analyst with RCA Astro-Electronics in East Windsor, NJ. He received a Ph. D. in Mechanical Engineering and an M. S. in Mathematics from Drexel University in 1992. He was a postdoctoral researcher at USAF Wright Laboratories in Dayton, OH, and at the Institute for Mathematics and its Applications in Minneapolis, MN. He has held numerous leadership positions, including Associate Editor of the ASME/IEEE Transactions on Mechatronics, the ASME Journal of Dynamic Systems, Measurement, and Control, and the IEEE Transactions on Automatic Control. He was Program Chair of the 2014 ASME Dynamic Systems and Control Conference, General Chair of the 2016 IEEE International Conference on Advanced Intelligent Mechatronics, and General Chair of the 2018 American Control Conference. He is a member of the Executive Committee of the ASME Dynamic Systems and Control Division. In 2008 he spent seven months in Sri Lanka as a Fulbright Scholar. He was selected a Fellow of the ASME in 2011. He arrived at NSF as an IPA rotator in May, 2014, and became a member of the permanent NSF staff in September 2018.

**Dr. Irina Dolinskaya** is a Program Director at the National Science Foundation (NSF) in the Division of Civil, Mechanical & Manufacturing Innovation (CMMI). Dr. Dolinskaya services Dynamics, Control and Systems Diagnostics (DCSD) program, as well as National Robotics Initiative (NRI 2.0) and Navigating the New Arctic (NNA) NSF's 10 Big Ideas. Prior to joining NSF, Irina Dolinskaya was a faculty in the Industrial Engineering and Management Sciences department at Northwestern University. She obtained M.S. and Ph.D. degrees in Industrial and Operations Engineering from the

University of Michigan, and B.S. degree in Industrial Engineering from the University of Florida. Dr. Irina Dolinskaya's research is in the field of transportation science and logistics with focus on adaptive modeling and solution approaches to integrate dynamic real-time information. Her current primary applications are in humanitarian logistics, optimal vessel performance, and electric vehicle routing. Irina Dolinskaya is the winner of the INFORMS Transportation Science & Logistics Society Dissertation Prize and the 2008 recipient of the Bonder Scholarship for Applied Operations Research in Military Applications.

SPECIAL SESSIONS ACC 2020

**Dr. Robert G. Landers** is a Curators' Distinguished Professor of Mechanical Engineering in the Department of Mechanical and Aerospace Engineering at the Missouri University of Science and Technology (formerly University of Missouri Rolla) and served as the department's Associate Chair for Graduate Affairs for eight years. He is currently a program manager at the National Science Foundation. He received his Ph.D. degree in Mechanical Engineering from the University of Michigan in 1997. His research interests are in the areas of modeling, analysis, monitoring, and control of manufacturing processes, and in the estimation and control of lithium ion batteries and hydrogen fuel cells. He has over 200 refereed technical publications and over \$6M in

research funding. He received the Society of Manufacturing Engineers' Outstanding Young Manufacturing Engineer Award in 2004 and the *ASME Journal of Manufacturing Science and Engineering* Best Paper Award in 2014. He is a Fellow of ASME, and a senior member of IEEE and SME.

**Dr. Eduardo Misawa** has a B.Sc. and M.Sc. degrees from University of Sao Paulo (1979 and 1983) and Ph.D. degree from the Massachusetts Institute of Technology (MIT, 1988), all in Mechanical Engineering with concentration in Dynamics and Control. He is currently a Program Director in the Directorate for Engineering at the National Science Foundation, where he manages the Engineering Research Centers (ERC) and Network for Computational Nanotechnology (NCN) programs. His research experience includes Nonlinear Dynamics, Nonlinear Control, Robust Control, Vibrations, Mechatronics, Nanotechnology, Precision Engineering, Vehicle Dynamics, Fluid Power Control, Bioinformatics, Biotechnology and Biomedical Engineering.

# Women in Control Luncheon Meeting

**Sponsor: IEEE CSS Women in Control Committee** Time: 12:00 – 1:30 Wednesday, July 1, 2020

**Location:** Ballroom F

**Organizers**: Dr. Linda Bushnell, University of Washington

Dr. Afef Fekih, University of Louisiana

Dr. Jacquelien M.A. Scherpen, University of Groningen

The IEEE CSS Women in Control committee is responsible for, but not limited to, promoting membership, gathering and disseminating appropriate information about women in IEEE CSS and the profession, and facilitating the development of mentoring and programs to promote the retention, recruitment, and growth of women IEEE CSS members. The IEEE WiC invites all ACC women attendees to join us for our traditional luncheon with interesting speakers on the first day of the conference, Wednesday, July 1<sup>st</sup>, 2020.

# Research with Broad Scope and High Impact in an Industrial Laboratory

**Sponsor:** Mitsubishi Electric (MERL)

**Time:** 12:00 PM – 1:30 PM Wednesday, July 1, 2020

**Location:** Gold

Mitsubishi Electric Research Laboratories (MERL) is a leading research organization located in Cambridge,

Massachusetts, USA that conducts fundamental research for industrially-motivated problems. MERL is a subsidiary of Mitsubishi Electric Corporation, a \$41B global manufacturer of a wide range of products including industrial robots, automotive electronics and equipment, HVAC (heating, ventilation, and air conditioning) systems, factory automation equipment, electrical power systems, elevators, satellites, and information visualization systems. MERL is an active and collaborative member of both the academic and industrial communities. MERL researchers collaborate with corporate laboratories and business units in Japan, as well as academic partners from around the world to develop novel solutions to challenging problems. In particular, several researchers at MERL develops new theoretical results in control and systems theory and apply them to a wide variety of products and applications.

In this talk we will present an overview of research activities at MERL, including fundamental controls research and the application of state-of-the-art control techniques to a variety of real-world systems. We will focus on fundamental research subjects including model predictive control and the control of constrained systems, estimation and motion planning for autonomous systems, and learning for control. In addition, we will describe how these fundamental research areas impact applications such as autonomous vehicles, spacecraft guidance and control, GNSS-based positioning, energy-efficient HVAC systems, high-precision manufacturing.

We encourage students, researchers and faculty interested in collaborating with MERL to attend this talk.

#### **Speakers:**

**Dr. Karl Berntorp's** research is on statistical signal processing, sensor fusion, and optimization-based control, with applications to automotive, aerospace, transportation, and communication systems. His work includes design and implementation of nonlinear filtering, constrained control, and motion-planning algorithms.

**Dr. Claus Danielson's** research interests are in model predictive control, constrained control, and networked control systems. His doctoral research was focused on exploiting symmetry in large-scale control and optimization problems.

**Dr. Stefano Di Cairano's** interests are model predictive control, constrained control, path planning, optimization algorithms, stochastic systems, and their applications to automotive, aerospace, and factory automation. Stefano is the Chair of IEEE CSS Technology Conferences Editorial Board, and the Vice-Chair of IFAC Technical Committee on Optimal Control.

**Dr. Rien Quirynen's** research interests are in model predictive control and moving horizon estimation, numerical algorithms for (nonlinear) dynamic optimization and real-time control applications. His doctoral research was focused on numerical simulation methods with efficient sensitivity propagation for real-time optimal control algorithms.

#### WEDNESDAY AFTERNOON SPECIAL SESSIONS

#### **Women in Controls in Industry**

Sponsor: ASME Dynamic Systems and Control Division, Automotive and Transportation

**Systems Technical Committee and the Energy Systems Technical Committee** 

Time: 1:30 PM – 3:30 PM, and 4:00 PM -6:00 PM, Wednesday, July 1, 2020

**Location:** Ballroom F

Organizers: Dr. Selina Pan, Toyota Research Institute

Dr. Marcello Canova, The Ohio State University
Dr. Mahdi Shahbakhti, University of Alberta
Dr. Yan Chen, Arizona State University

Dr. Carrie Hall, Illinois Institute of Technology

Academic research and industry development have a symbiotic relationship. The insights gleaned from academic research can be propagated into usable products and technologies by companies. The practical problems identified in industry can also inspire and develop new academic research topics and areas and these new areas of research and development can be explored jointly. This cycle and relationship is key for researchers to understand and to participate in. To facilitate these connections, every year, the ASME Dynamic Systems and Control Division organizes an industry special session at a major controls conference.

Nowadays, both academia and industry host increasingly diverse communities. These communities consist of researchers, engineers, teachers, programmers, and managers, and their members are thriving from many different backgrounds. A historically underrepresented group has been female engineers and engineers who identify as women. (For the purposes of brevity for this proposal, we will use the term "women" going forward.)

This session seeks to bring together both the importance of exposure to parallel work happening in industry, with the diverse people who are doing the work, to the American Control Conference. Academia is taking increasingly large strides to increase diversity in both its student population as well as its faculty. Industry is doing the same, in both similar and diverging ways, with efforts ranging from recruiting, changing hiring practices, evolving performance review processes, workshops in unconscious bias, employee resource groups, and setting diversity and inclusion as a company-wide initiative.

The speakers featured in this session have a variety of technical experiences and we aim to, first and

foremost, focus on their technical work and present a wide array of different career paths. The purpose of this is twofold: 1) to showcase some of the current cutting-edge work being done in industry in controls, and 2) to demonstrate examples and inspire junior women researchers who may be looking for a broader range of career paths. The session will feature both a series of technical talks, as well as a panel discussion that will be moderated and open to questions from the audience, in order to provide room to discuss potential non-technical topics unique to the experience of being a woman in controls in industry.

This special session is sponsored by the Automotive Transportation Systems and Energy Systems Technical Committee. The proposed list of speakers consists of engineers from the following companies: RightHook Robotics, Tesla, Applied Materials, Built Robotics, Waymo (Google), Ford, Toyota Research Institute, General Motors, and a stealth robotics startup.

#### **Organization and Contribution**

This session includes contributions from industry engineers who have been active in the areas of automotive, energy, and mechatronics research and development areas. The tentative list of speakers is compiled from the automotive, energy, robotics, and tech industries.

The session is roughly organized into two parts. The first part (1:30-4:50 PM) features technical talks from each speaker in their area of expertise. The speakers featured come from a variety of different companies. We propose to feature speakers from RightHook, Applied Materials, Waymo (Google), Tesla, Built Robotics, and Ford, with additional speakers pending company approval from Toyota, GM, and a stealth robotics startup. These companies are all leading the industry in the automotive, robotics, and controls areas.

The second part (4:50 PM – 5:30 PM) features a panel discussion with a subset of speakers, with Selina Pan (industry liaison from the Automotive Transportation Systems Technical Committee) as the moderator, welcoming questions from the audience. Being able to hear the speakers discuss their career and life experiences as women working in industry in controls has the potential to provide key insights and inspiration to aspiring junior engineers who are still seeking a career path in STEM, whether in research, academia, industry, or the start-up world. Because the session focuses on women in controls, we see great value in presenting the stories of established speakers behind their technical work.

#### **Presentations:**

#### Speaker: Dr. Madeline Goh, RightHook Robotics

**Abstract**: Highly Automated Driving Development and the Simulation Portability Problem - For the last several years, questions have swirled around how autonomous vehicles will be validated. The general consensus has come to a mix of on-road testing and simulation. With so many companies and stakeholders in the mix, how will standards be determined and met? We present ScenarioScript: an open, portable specification for describing scenarios used for developing, testing, and demonstrating automated vehicle systems.

Speaker: Dr. Caroline Le Floch, Tesla

Speaker: Dr. Raechel Tan, Applied Materials

**Abstract**: Advanced Control Applications in Semiconductor Processing Equipment - In semiconductor processing equipment, achieving the best device performance and yield requires minimal process variation.

Fast controls is also important, since this determines the rate at which wafers can be processed. At Applied Materials, the Common Solutions Group is working on advanced control solutions to enable greater precision and faster throughput.

#### Speaker: Dr. Sarah Thor, Built Robotics

Abstract: From Human Algorithms to Computer Algorithms: A High-Level Planning Problem - Built Robotics is building the future of construction by developing AI guidance systems to transform construction equipment into autonomous robots. The technology combines sensors, such as GPS, cameras and lidar with proprietary software, in order to make construction safer and more productive. Human operators already possess great skill in operating heavy construction machinery, such as bulldozers, excavators and skid steers. Before an operator begins moving dirt, he or she has an inherent algorithm in mind on how to take the current terrain and transform it to meet the job specifications. Our robots must also assess the current terrain and autonomously come up with a plan to accomplish the same job specifications. As robots have different capabilities to humans, the algorithm a human uses does not strictly overlap with the robot's algorithm. In this talk, we will go over some of the techniques and considerations human operators keep in mind for high-level planning of the job and discuss how Built Robotics tackles the high-level planning problem.

#### Speaker: Dr. Xin Zhou, Waymo (Google)

**Abstract**: This talk will focus on how individuals with training and expertise in control can branch into new technical disciplines, discover new research challenges at the interface of control and other fields, and explore different career options. Using my own experience, I will give several examples about how knowledge in control can help with many aspects of the development of driver-assist and autonomous driving technologies, including control and planning, object tracking, and deep learning. At the end of the talk, a brief introduction to Waymo will be given.

#### Speaker: Dr. Sara Dadras, Ford

**Abstract**: According to the National Highway Traffic Safety Administration (NHTSA), in 2017 alone, the NHTSA reported 34,247 fatal crashes in the United States with 37,133 fatalities. Furthermore, as of August 1, 2019, the California DMV has received 186 Autonomous Vehicle Collision Reports. Ford Motor Company aims to help society with not only providing the safest vehicles on the road but also making the vehicles more comfortable for the customers. Automated driving is one solution that significantly improves roadway safety. This talk gives an overview of Ford Greenfield Labs at Palo Alto, California, and reviews some areas of research in automated driving systems.

#### **Panel Discussion**

- Dr. Madeline Goh, RightHook Robotics
- **Dr. Raechel Tan**, Applied Materials
- Dr. Sarah Thornton, Built Robotics
- Dr. Sara Dadras, Ford

#### **Speaker bios:**

**Dr. Madeline Goh** left Minnesota and academia after earning her PhD in mathematics to pursue a career in industry. She is particularly inspired by solving problems that impact people's daily lives, from barcodes to self-driving vehicles. Currently she is a Machine Learning Expert and Senior Engineer at San Jose based startup, RightHook, Inc. RightHook provides a simulation platform for testing and development of

autonomous vehicles. Madeline is a people person and loves spending time with her siblings, urban exploration, puppies, and supporting women in technology.

**Dr. Caroline Le Floch** leads the development of the Autobidder software at Tesla, the first automated and algorithmic bidding platform for utility scale energy storage. I obtained a Master of Science in Applied Mathematics from Ecole Polytechnique (Paris, France), and PhD in Civil and Environmental Engineering at UC Berkeley. During my PhD in the Energy Controls and Applications Lab at UC Berkeley, I focused on Smart Charging optimization methods for large fleets of electric vehicles, including distributed optimization and Plug and Play model predictive Controls. After PhD I created a startup and sold smart charging software to automakers and aggregators. In May 2018 I joined the energy optimization team at Tesla, where I have focused on utility scale projects and the development of algorithmic bidding in energy markets. I am the leading engineer for Autobidder – the money making machine – that automates bidding of energy storage assets in electricity markets.

**Dr. Raechel Tan** is a controls engineering manager in the Mechatronics Center of Excellence at Applied Materials. She leads a team to develop advanced solutions for temperature, pressure, and motion control across the company. Before starting at Applied Materials, she obtained her Ph.D. in Mechanical Engineering at UC Berkeley, where she did research on automotive engine control.

**Dr. Sarah Thornton** received her Ph.D. in mechanical engineering at Stanford University in 2018. Her thesis was on designing autonomous vehicle motion planning algorithms with ethical considerations. She obtained her Master's in mechanical engineering from MIT in 2013 and her Bachelor's in mechanical engineering from UC Berkeley in 2011. She currently works as a Senior Robotics Engineer at Built Robotics, where she has worked on an array of projects ranging from designing parts of their safety system to designing high-level planning algorithms.

**Dr. Xin Zhou** received her PhD from the University of Michigan in Mechanical Engineering in 2017 with a focus on control, estimation, dynamic system modeling and identification. Prior to joining the University of Michigan, she received her Bachelor of Engineering in Machine Design, Manufacturing, and Automation from Huazhong University of Science and Technology, Wuhan, China, in 2012. Dr. Zhou joined Aptiv immediately after receiving her doctorate to develop object tracking algorithms for advanced driver-assistance systems. In 2018, she joined Waymo as a Software Engineer/Robotics Researcher focusing on perception of the autonomous vehicle. She is the lead author of six publications and a finalist for three best student paper awards and a best paper award.

**Dr. Sara Dadras** (IEEE Senior Member, 2018) is currently an Automated Driving Senior Research Engineer at Ford Motor Company. Prior to that, she was a research engineer working on research and development of Plug-in Hybrid Electric Vehicle systems with respect to energy management. Passionate about vehicles, she worked on various projects including battery management systems, wireless power transfer systems, model based system design for advanced HEVs and PHEVs. Her current research interest areas include autonomous vehicles, advanced driver assist systems, hybrid electric and electric vehicles, nonlinear systems and control, and application of fractional calculus in control of nonlinear systems. Dr. Dadras was the recipient of the 2019 Forest R. McFarland Award (SAE) and Ford 2018 R&A Technical Achievement Award (RARE Award). She is the Associate Editor of the IEEE Transactions on Control Systems Technology, IEEE Access, IEEE Transactions on Automation Science and Engineering, Asian Journal of Control and Conference Editorial Board member of IEEE.

#### NREL's Control Research: Enabling a Clean Energy Future

**Sponsor:** The Department of Energy National Renewable Energy Laboratory

Time: 1:30 PM -3:00 PM Wednesday, July 1, 2020

**Location:** Gold

The National Renewable Energy Laboratory (NREL), located in Golden, Colorado, is the United States' primary laboratory for renewable energy and energy efficiency research and development. Control plays a crucial role in NREL's mission to advance the science and engineering of energy efficiency, sustainable transportation, renewable power technologies, and energy systems integration. This special session will provide an overview of NREL, followed by in-depth discussion of NREL's control research in various areas such as building, grid, wind, energy storage, and transportation. The goal of the session is to give the audience an opportunity to understand the typical control research projects at NREL and how to collaborate with NREL.

#### **Presentations:**

- 1. Dr. Xin Jin, "Model Predictive Control for Grid-Interactive Efficient Buildings and Communities"
- 2. Dr. Andrey Bernstein, "Learning to Optimally Control Grid-Interactive Efficient Buildings"
- 3. Dr. Jennifer King and Dr. Christopher Bay, "Autonomous Wind Farms: Distributed Optimization and Control for Wind"
- **4. Dr. Ying Shi,** "Advanced Controls of Energy Storage Systems for Better Performance, Safety, and Life"
- 5. Dr. Myungsoo Jun, "Smart Electric Vehicle Charge Management for Demand Charge Mitigation"

**Dr. Xin Jin** is a Senior Research Engineer in the Buildings and Thermal Sciences Center at NREL. He is also the Sensors and Controls innovation area lead of NREL's Buildings program. His research focuses on building-to-grid integration, building control, machine learning with applications in buildings, and fault detection and diagnosis. Dr. Jin leads several research projects funded by the U.S. Department of Energy Building Technologies Office and Solar Energy Technologies Office. He is the lead developer of foreseeTM, a user-centric, cybersecure home energy management system. He received his Ph.D. in Mechanical Engineering from Pennsylvania State University. He has authored more than 50 peer reviewed technical publications and 10 software records and

U.S. patent. He is an ASHRAE member and IEEE member, and is a recipient of the 2018 R&D 100 Award and 2017 NREL President Award.

**Dr. Andrey Bernstein** received his B.Sc., M.Sc. (both summa cum laude), and Ph.D. degrees in Electrical Engineering from the Technion - Israel Institute of Technology. Between 2010 and 2011, he was a visiting researcher at Columbia University. During 2011-2012, he was a visiting Assistant Professor at the Stony Brook University. From 2013 to 2016, he was a postdoctoral researcher at the Laboratory for Communications and Applications of Ecole Polytechnique Federale de Lausanne (EPFL), Switzerland.

Since October 2016 he has been a Senior Scientist at NREL. In February 2018, he became a group manager for the Energy Systems Control and Optimization Group. His research interests are in the decision and

control problems in complex environments and related optimization and machine learning methods, with particular application to power and energy systems.

**Dr. Jennifer King** is a Research Engineer at NREL working at the National Wind Technology Center on hybrid system modeling and control. This includes developing model and real-time distributed optimization capabilities for wind farm control, optimally designing and operating utility-scale hybrid power plants as well as developing

a control framework for large-scale autonomous energy systems. Jennifer obtained her Ph.D. in Aerospace Engineering and Mechanics from the University of Minnesota in 2016 where her primary focus was on reduced-order modeling for wind farm control. Her current research focus areas are in reduced-order modeling, distributed control/optimization, and flow control.

**Dr. Christopher Bay** is a Research Engineer at NREL. His current work includes wind farm control and optimization, involving distributed control and layout design to improve performance and meet secondary objectives. He is also tackling multi-system problems through developing cooperative control between wind energy plants and buildings. Christopher received his Ph.D. in Mechanical Engineering from Texas A&M University in 2017 where his research centered around scalable, distributed control of building energy systems.

**Dr. Ying Shi** is a Senior Research Engineer in Power Systems Engineering Center at NREL. She has been working on lithium-ion battery systems testing, modeling, analysis and control to improve battery performance and life, increase pack utilization and reduce upfront and lifetime cost for stationary and automotive applications. Dr. Shi received a bachelor's degree in Mechanical Engineering from Shanghai Jiao Tong University in Shanghai, China in July 2008. She received dual master's degree in electrical engineering and mechanical engineering from Pennsylvania State University in University Park, PA, USA, in May 2012 and May 2013. She received her Ph.D. degree in mechanical

engineering from Pennsylvania State University in December 2013, with focus on modeling, real-time identification and remediation of degradations in lead-acid batteries for hybrid locomotive applications

**Dr. Myungsoo Jun** has been performing research on vehicle electrification, EV charging station management, and smart transportation systems. He is currently actively conducting research on smart charge management and battery BMS for EV. He also led a project on smart intersection sensing systems. Before joining NREL in 2011, Dr. Jun had extensive experiences in the areas of autonomous ground vehicles and unmanned aerial vehicles including UAV/UGV trajectory planning, dynamic collision avoidance, and attitude estimation with vision camera sensors. He conducted projects on UAV/UGV funded by DARPA, AFRL, and JPL during his affiliation with Oshkosh Corp., University of Florida, and Cornell University.

# Workshop for Elementary, Middle and High School Students and Teachers and Parents: The Power, Beauty and Excitement of the Cross-Boundaries Nature of Control, a Field that Spans Science, Technology, Engineering & Mathematics

Sponsor: AACC, IEEE CSS, and IEEE CSS Technical Committee on Control Education

Time: 1:30 PM – 3:30 Wednesday, July 1, 2020

**Location:** Silver

**Organizers**: Dr. Bozenna Pasik-Duncan, University of Kansas

Dr. Linda Bushnell, University of Washington Dr. Tyrone Duncan, University of Kansas Dr. Anthony Rossiter, University of Sheffield

#### **Program Committee:**

AACC Technical Committee on Education
IFAC Technical Committee on Control Education
IEEE CSS Technical Committee on Control Education

This outreach event is designed to increase the general awareness of the importance of systems and control technology and its cross-disciplinary nature among students and teachers. Control is used in many common devices and systems: cell phones, computer hard drives, automobiles, and aircraft, but is usually hidden from view. The control field spans science, technology, engineering and mathematics (STEM). The success of all STEM disciplines depends on attracting the most gifted young people to science and engineering professions. Early exposure to middle and high school students and their teachers is a key factor. The goal of these outreach efforts is to promote an increased awareness of the importance and cross-disciplinary nature of control and systems technology.

Workshop activities include presentations, informal discussions, and the opportunity for teachers and students to meet passionate researchers and educators from academia and industry. The talks are designed to be educational, interactive, motivating and inspirational showing the excitement of STEM education.

#### **Presentations include:**

Speaker: Dr. Daniel Abramovitch, Agilent Technologies

**Title:** What Is a Control System and Why Should I Care?

**Abstract**: After years of teaching coaching little league trying to explain control systems to biologist and computer scientist friends, I will try the ultimate test of explaining the topic to a group of bright and easily bored high school kids. We will go through examples of feedback in everyday life, and then tease out what is common to all these examples. We will talk about how the "control" is computed, even when we don't have a computer. And we will talk about the dreaded math of control systems, and explain why we use it and what it tells us. The talk will finish with some general lessons about science and engineering, and why anyone might want to learn these intense subjects.

Speaker: Dr. Dominique Duncan, University of Southern California

Title: Stepping Inside the Brain Using Virtual Reality

Abstract: The Epilepsy Bioinformatics Study for Antiepileptogenic Therapy (EpiBioS4Rx) is an ongoing

international, multi-site Center Without Walls that is collecting data from moderate-severe traumatic brain injury (TBI) patients and an animal model (Duncan et al., 2018a). We have been developing innovative methods to analyze the multimodal data with the goal to identify biomarkers of epileptogenesis, the development of epilepsy, after TBI. We are applying various machine learning methods as well as dimensionality reduction tools (Duncan et al., 2016), to the electrophysiology and imaging data. These theoretical techniques and associated models and optimization methods will be applicable not only to this dataset but to other multi-species or multi-domain transfer learning challenges that may arise in the context of health and medicine. We have partnered with several local high schools to hold educational workshops and research experience for K-12 students with this project. Furthermore, we have developed a virtual reality tool for visualizing neuroimaging data, including TBI lesions, and correcting segmentation errors that can be used as an educational neuroanatomy tool (Duncan et al., 2018b).

#### Speaker: Dr. Tembine Hamidou, New York University

**Title:** Risk-Aware Performance Metrics in STEM

**Abstract**: We live truly in a more and more interconnected and interactive world. In recent years, we have seen emerging technologies such as internet-of-everything, collective intelligence (including artificial intelligence), blockchains and next generation wireless networks. The quantities-of-interest in these systems involve uncertainties, volatilities and risk. In this talk we revisit how engineers and scientists incorporate, model, control and optimize societal problems under uncertainties.

#### Speaker: Dr. Richard M. Murray, California Institute of Technology

Title: How to Design a Self-Driving Car

Abstract: Building robots that can do things as well as humans has been the goal of scientists and engineers for decades. Despite what we see in the movies and on TV, getting a real robot to perform as well as a human can is still a challenge goal. Approximately 15 years ago, the US has sponsored a competition to spur advances in robotics, called the DARPA Grand Challenge. This competition paved the way for the advances that we see today in the development of autonomous cars. In this talk I will explain how these cars work and some of the engineering challenges that remain.

**Title:** Synthetic Biology: How to Program a Bacterium

**Abstract**: Synthetic biology is an emerging field that focuses on engineering biomolecular systems that are programmed via DNA to perform useful functions such as environmental bioremediation, diagnostics and therapeutics for human health, green manufacturing of chemicals, and production of engineered living materials and synthetic cells. In this talk I will give an introduction to synthetic biology and show how concept and tools from feedback control can help provide new methods for engineering biological systems.

#### Speaker: Dr. Lucy Pao, University of Colorado Boulder

Title: Efficient Wind Energy Systems—How Control Methods Can Enable a Clean Energy Future Abstract: Wind energy is recognized worldwide as cost-effective and environmentally friendly and is among the fastest-growing sources of electrical energy. We will provide an overview of wind energy systems, discuss some of the challenges in the design and operation of wind turbines and wind farms, and

highlight how control methods have improved the performance of these systems. We shall close by discussing continuing challenges and on-going and future research that can further facilitate the growth of wind energy.

Speaker: Dr. Ramla Qureshi, Women Engineers Pakistan (WEP)

**Title:** STEM is for Everyone!

Abstract: Within the domains of STEM education, numerous surveys across the globe have presented data where, up till grade 8, young girls have outperformed boys in science subjects. But fewer than 11% women worldwide are within engineering. This disparity begs to ask: what changes after grade 8th which makes the girls opt out of careers in engineering, technology, math, and physics? It is our belief that societal pressures and stereotypical fear of math and physics inhibits inclination to STEM education and consequent STEM careers for many young students across the globe. Planning and building games around math and physics problems helps dispel this fear, and encourages students to understand other, more complex systems in a fun manner that is easier to remember during exams and in general. The concept of game-based STEM learning sessions is not to teach rocket science in one day, rather it is to inculcate a sense of belonging within young students who feel inhibitions regarding their innate abilities in STEM subjects. This session is designed for middle school students.

#### **Speaker bios:**

**Dr. Daniel Abramovitch** earned degrees in Electrical Engineering from Clemson (BS) and Stanford (MS and Ph.D.). After a brief stay at Ford Aerospace, he worked at HP Labs for 11 1/2 years, studying control issues for optical and magnetic disk drives. He moved to Agilent Labs shortly after the spinoff from HP, where he has spent 20 years working on test and measurement systems. He is currently in Agilent's Mass Spectrometry Division working on improved real-time computational architectures for

Agilent's mass spectrometers. Danny is a Senior Member of the IEEE and was Vice Chair for Industry and Applications for the 2004 American Control Conference (ACC), for Workshops at the 2006 ACC, for Special Sessions at the 2007 ACC, and for Industry and Applications for the 2009 ACC. He was Program Chair for the 2013 ACC and General Chair of the 2016 ACC in Boston. He has organized tutorial sessions on disk drives, atomic force microscopes, phase-locked loops, laser interferometry, and how business models and mechanics affect control design. He was Chair of the IEEE CSS History Committee from 2001 to 2010. Danny had the original idea for the clocking mechanism behind the DVD+RW optical disk format. He was on the team that prototyped Agilent's first 40Gbps Bit Error Rate Tester (BERT). He and Gene Franklin were awarded the 2003 IEEE Control Systems Magazine Outstanding Paper Award. He was a Keynote Lecturer at the 2015 MSC in Sydney. His recent work for Agilent was on high speed atomic force microscopes and high precision interferometers, and currently works on improving the real-time control, data collection, and signal processing chain on Agilent's Mass Spectrometers. He is part of the team that introduced the multi-award winning Ultivo Tandem Quad Mass Spec in 2017. He is the holder of over 20 patents and has published over 50 reviewed technical papers.

**Dr. Dominique Duncan** is an assistant professor of neurology at the Laboratory of Neuro Imaging of the USC Stevens Neuroimaging and Informatics Institute. Prior to her current position she was a postdoctoral scholar at the Mathematics Department at the University of California, Davis, a postdoctoral fellow at the Department of Neurology and Neurological Sciences at the Stanford University School of Medicine. She received her PhD in Electrical Engineering from Yale University in 2013 and a BS in Mathematics from the University of Chicago in 2007 as well as a BA in Polish Literature and minor

in Computational Neuroscience. During her collaborating with neurologists and neuroscientists from the Yale University School of Medicine, and mathematicians, engineers, and computer scientists. She is a

recipient of a University of Chicago Scholarship, Yale University Faculty of Engineering Fellowship, NSF REU scholarship, summer undergraduate program in engineering research scholar at the University of California, Berkeley, several travel awards from the National Science Foundation (NSF), the National Institute of Health (NIH), and the Association for Women in Mathematics (AWM) Travel Award. She is passionate about teaching international students and about community and outreach service. She has an established record of holding leadership positions that include being the Chair of the University of California, Davis Postdoctoral Scholars Association, Council Member in the Stanford University Postdoctoral Association, senator representing engineering for the Yale University Graduate and Professional Student Senate, President of the University of Chicago Polish American Student Association, Chair of the University of Chicago Committee on Recognized Student Organizations, University of Chicago Student Government Executive Committee member, American Automatic Control Council (AACC) TC on Education member, IEEE Control System Society (CSS) TC on Control Education member, and appointed member of IFAC TC on Control Education. She has been a frequent speaker on "Math & Epilepsy" at workshops for elementary, middle and high school students and teachers.

**Dr. Tembine Hamidou** received the M.S. degree in Applied Mathematics from Ecole Polytechnique (Palaiseau, Paris, France) in 2006 and the Ph.D. degree in Computer Science from University of Avignon in 2009. His current research interests include evolutionary games, mean-field-type games and applications. In December 2014, Tembine received the IEEE ComSoc Outstanding Young Researcher Award for his promising research activities for the benefit of the society. He was the recipient of 10

best article awards in the applications of game theory. He is author of the book on "Distributed Strategic Learning for Wireless Engineers" (published by CRC Press, Taylor & Francis 2012), and co-author of the book "Game Theory and Learning in Wireless Networks" (Elsevier Academic Press). Tembine has been co-organizer of several scientific meetings on game theory in networking, wireless communications, smart energy and transportation systems. He is a Next Einstein Fellow.

**Dr. Richard Murray** received the B.S. degree in Electrical Engineering from California Institute of Technology in 1985 and the M.S. and Ph.D. degrees in Electrical Engineering and Computer Sciences from the University of California, Berkeley, in 1988 and 1991, respectively. He is currently the Thomas E. and Doris Everhart Professor of Control and Dynamical Systems and Bioengineering at Caltec. Murray's research is in the application of feedback and control to network systems with applications in biology and autonomy. Current projects include design of safety-critical control systems and synthetic biology.

**Dr. Lucy Pao** is the Palmer Endowed Chair Professor in the Electrical, Computer, and Energy Engineering Department at the University of Colorado Boulder. She earned B.S., M.S., and Ph.D. degrees in Electrical Engineering from Stanford University. Her research has primarily focused on engineering control systems, with applications ranging from atomic force microscopes to multi-megawatt wind energy systems. She is a Fellow of the IEEE and the International Federation of Automatic Control (IFAC). Selected recent awards include the 2012 IEEE Control Systems Magazine Outstanding Paper

Award (with K. Johnson), the 2015 Society for Industrial and Applied Mathematics (SIAM) Journal on Control and Optimization Best Paper Prize (with J. Marden and H. P. Young), the 2017 Control Engineering Practice Award from the American Automatic Control Council, the Scientific Award 2017 from the

European Academy of Wind Energy, and the 2019 Nyquist Lecturer Award from the ASME Dynamic Systems & Control Division. Selected recent and current professional society activities include being a Fellow of the Renewable and Sustainable Energy Institute (2009-present), General Chair of the 2013 American Control Conference, member of the IEEE Control Systems Society (CSS) Board of Governors (2011-2013 and 2015), IEEE CSS Fellow Nominations Chair (2016-2018), member of the IFAC Fellow Selection Committee (2014-2017 and 2017-2020), and member of the IFAC Executive Board (2017-2020).

**Dr. Ramla Qureshi**, CEO of Women Engineers Pakistan (WEP), started WEP in 2013 as part of her unwavering commitment to empower women in STEM disciplines. She also asks for male participation at their university chapters structural and earthquake engineering working on her thesis in structural damage, devising new methods for testing structural resilience against fire and earthquake hazards. WEP calls upon men to advocate for their friends and classmates—and the future. Her skills and areas of expertise

include encouraging women and young professionals to pursue engineering. She received her B.S. from National University of Sciences and Technology in Pakistan. She is a Fulbright Scholar and PhD student in Citizen's Foundation-school initiative in Pakistan. Ramla was nominated by the University of Buffalo's School of Engineering She is currently involved with ERI, ACI student member, ASCE, Engineer-in-Training. She is drawn to and passionate about charitable organizations such as and Applied Sciences to represent the school at the Advancement of Science and Association of Public and Land-grant Universities' (AAAS) Catalyzing Advocacy in Science and Engineering (CASE) workshop in Washington DC.

#### THURSDAY NOON SPECIAL SESSIONS

### Control Design for SuperCruise Automated Driving: Systems, Algorithms, Challenges and Solutions

**Sponsor:** General Motors

**Time:** 12:00 – 1:30 PM Thursday, July 2, 2020

**Location:** Room 51

Automated vehicles are computers that perform several functions necessary to understand the world and make driving decisions. Developing such systems is challenging, since driving is a multi-variable, multi-objective, nonlinear and sometimes uncertain task, in which multiple agents including drivers, pedestrians, devices and environment interact in real-time.

This talk provides a technical review of lateral controls in GM's SuperCruise, the industry's first hands-free driving technology for the highway. Several aspects of the system are discussed, including systems and components, hardware redundancy to ensure safety, hardware/software integration, and technical aspects in vehicle dynamics, sensing, fusion, path planning and controls.

Specific case studies are provided which highlight application of controls techniques to develop various functionalities that enable operation of SuperCruise.

**Dr. Reza Zarringhalam** is Global Technical Lead for Lateral Controls at General Motors Canada Technical Center. He is currently leading the design of advanced lateral controls software at GM for various features including SuperCruise. Before joining GM Canada, Reza had more than 10 years of R&D experience in controls and automotive industry, including his MSc research on applications of AI for automated driving at K.N.T.U, Iran; and his PhD research on fault-tolerant estimation of vehicle states at University of Waterloo, Canada. Reza has made numerous contributions through patents

and publications, is a reviewer of multiple international journals and has extensive teaching experience in Controls and Mechatronics. He is passionate about technology and innovation to build a better future, today.

### Bridging the Theory-Practice Gap in Robotics on a Massive Scale in Georgia Tech's Robotarium

**Sponsor:** Mathworks

**Time:** 12:00 PM – 1:30 PM, Thursday, July 2, 2020

**Location:** Room 50

The Robotarium is a remotely accessible swarm robotics lab that allows users from all over the world to upload control code, written in MATLAB, and run experiments. Since its official launch in August 2017, over 5000 remote experiments have been conducted by users from all continents (except Antarctica). The impetus behind the Robotarium project is to provide broad, democratized access to a world-class research facility, and users span the gambit from robotics researchers to middle-school students. This talk will discuss the technical challenges associated with the Robotarium as well as a lessons learned in remote-access experimentation.

**Dr. Magnus Egerstedt,** Steve W. Chaddick School Chair and Professor in the School of Electrical and Computer Engineering at the Georgia Institute of Technology.

#### THURSDAY AFTERNOON SPECIAL SESSIONS

### **Promoting Access for Under-represented Groups in STEM Graduate Disciplines**

**Time:** 1:30 PM – 3:30 PM, Thursday, July 2, 2020

**Location:** Silver

This session consists of four presentations that addresses successful academic and professional practices that support completion of a STEM graduate education and transition to the professoriate for under-

represented groups.

A motivation for the session is that the demographics in the U.S. is changing but noticeably, the number of graduate degrees in STEM disciplines remain unpopulated by this change. To meet this rising change, professional societies and academic institutions must embrace systematic and thoughtful changes in how access is provided, how practices are implemented, and what policies are crafted.

This session is intended to serve three purposes: (i) present the challenges faced by under-represented groups at the graduate level, (ii) provide examples of programs and/or procedures that bolster graduate education in STEM disciplines, and (iii) have an open dialogue about the difficulties of instituting systemic change at the professional society, academic institution, college, and department levels.

#### Outline of the session:

- 1. Dr. Karlene Hoo (Gonzaga University), "Brief Opening Remarks to Introduce the Topic"
- 2. **Dr. Bozenna Pasik-Duncan** (University of Kansas), "STEM Education of Tomorrow" A collaborative effort integrating scholarship, teaching, learning and broader impacts is the key to a success in STEM education. This collaborative effort needs to include academia, industry, government as well as teachers, parents, students and scholars. By working together as partners who are all learners in the process of STEM education, we can make a difference. Best practices in this effort are shared.
- 3. **Dr. Martha Grover** (Georgia Institute of Technology), "Graduate Training for Equality in Underrepresented Academic Leadership"
  - The need to fund students on research grants may provide an unnecessary barrier to retention of PhD students from non-traditional backgrounds. Here we discuss the details of a program in the School of Chemical & Biomolecular Engineering at Georgia Tech, funded by ACS-Bridge, to expand the number of students from under-represented groups earning a PhD in the chemical sciences. The MS thesis program is utilized as a bridge from the BS to the PhD through modifications in timeline and sequencing, as well as additional mentoring.
- 4. **Dr. Karlene Hoo** (Gonzaga University), "Pathways to Support STEM Graduate Education for Indigenous Communities"
  - The NSF AGEP (Alliance for Graduate Education and the Professoriate) PNW COSMOS (Pacific NorthWest Collaborative Opportunities for Success in Mentoring of Students) Alliance's project was to address the scarcity of American Indian/Alaska Native (AI/AN) graduate students in STEM programs. In this presentation, two mentoring frameworks to promote retention and support of AI/AN graduate students will be described. The NSF-funded project resulted in the publication "Indigenous Communities and Access to Graduate Degrees in STEM," 2019 (eds: Hoo & Windchief) New Directions for Higher Education, No. 187.
- 5. **Dr. Bonnie Ferri** (Georgia Institute of Technology) and Leslie Sharp (Georgia Institute of Technology), "Hiring and Supporting a Diverse Faculty"

  This interactive session will explore some of the issues, challenges, and opportunities for hiring and supporting a diverse faculty in STEM disciplines. What are factors that influence the decision of under-represented groups to apply for and consider faculty positions? What are some policies, practices, and programs that support a healthy and productive culture among a diverse population?

Do our promotion and advancement practices need retuning? What contributions can a professional society have to support success? Finally, what can each of us do individually to support diversity, equity, and inclusion in the faculty ranks?

Note: Bonnie Ferri will conduct the session. Leslie Sharp (Associate Vice Provost for Graduate Education and Faculty Development, and CEO of the Library) will help to prepare the presentation materials and activities but will not be present at the session.

**Dr. Bozenna Pasik-Duncan** received M.S. degree in mathematics from University of Warsaw (Poland), and Ph.D. and D.Sc. (Habilitation Doctorate) degrees from Warsaw School of Economics (Poland). She is Professor of Mathematics; Courtesy Professor of EECS & AE; Investigator at ITTC; Affiliate Faculty at Center of Computational Biology, and Chancellors Club Teaching Professor at University of Kansas (Lawrence, KS). She is 2017-2018 IEEE Women in Engineering (WIE) Global Chair, founder of IEEE CSS Women in Control, founder and faculty advisor of Student Chapters of Association for Women in Mathematics (AWM) and Society for Industrial and Applied Mathematics

(SIAM) at KU, founder and coordinator of KU and IEEE CSS Outreach Programs, a Life Fellow of IEEE, and Fellow of IFAC. She is recipient of many awards that include IREX Fellow, NSF Career Advancement Award, Louise Hay Award, Polish Ministry of Higher Education Award, H.O.P.E. Award, Kemper Fellowship, IEEE Educational Activities Board Meritorious Achievement Award, the IEEE Third Millennium Medal and IEEE Control Systems Society Distinguished Member Award. She is inducted to the KU Women's Hall of Fame. Her broad research interests are primarily in stochastic adaptive control and its applications to science and engineering, and in STEM education.

**Dr. Karlene Hoo** received her a B.S. degree from the University of Pennsylvania (Philadelphia, PA) and her M.S. and Ph.D. degrees from the University of Notre Dame (Notre Dame, IN). All her degrees are in chemical engineering. She is currently, Dean of the School of Engineering & Applied Science at Gonzaga University (Spokane, WA). She held prior academic administrative positions at Texas Tech University (Lubbock, TX) and at Montana State University (Bozeman, MT). She has government experience with the National Science Foundation (Engineering Directorate), NASA Johnson Space

Center, and Sandia National Laboratories. She also has industrial experience with Exxon and DuPont. In 2009, she served as the General Chair of the American Control Conference (St Louis, MO). Her research interests are in sustainable chemical process designs, cardiovascular research, biofuel technologies, and graduate STEM education.

**Dr. Bonnie Ferri** received her a B.S. degree in electrical engineering from the University of Notre Dame (Notre Dame, IN), her M.S. degree in mechanical and aerospace engineering from Princeton (Princeton, NJ), and her Ph.D. degree in electrical engineering from Georgia Institute of Technology (Atlanta, GA). She is currently the vice provost for Graduate Education and Faculty Development at Georgia Institute of Technology. Her research interests are in embedded control systems, engineering

education, and real-time computing. She has received many honors and awards including the 2017 IEEE Undergraduate Teaching Award and the 2016 Regent's Award for the Scholarship of Teaching and Learning. She was the co-chair of a campus-wide commission at Georgia Tech on the future of higher education, an invited speaker at a National Academy of Engineering workshop on education, and a keynote

speaker at the 2019 IFAC Advances in Control Education Symposium. She is the General Chair of the 2022 American Control Conference to be held In Atlanta, GA.

**Dr. Martha Grover** received her a B.S. degree from the University of Illinois (Champaign, IL) and her M.S. and Ph.D. degrees from the California Institute of Technology (Pasadena, CA). She is Professor and Associate Chair for Graduate Studies in Chemical & Biomolecular Engineering at Georgia Tech and co-leads the new Graduate Training for Equality in Underrepresented Academic Leadership Program funded by the American Chemical Society through the NSF INCLUDES Network. Her research interests are in control of molecular organization, with applications in feedback control of colloidal crystallization for photonic materials, chemical evolution in the origins of life, modeling and control of pharmaceutical and nuclear waste crystallization,

and process-structure-property relationships in polymer organic electronics. Martha is the Program Chair of the 2020 American Control Conference and the General Chair for ACC in 2024. She also is the incoming chair for the AIChE Computing and Systems Technology Division and the IEEE CSS Liaison to the IEEE Women in Engineering (WIE) Committee.

#### Quantum Information Systems: Communication, Control and Computing

**Time:** 1:30 PM – 3:30 PM, Thursday, July 2, 2020

Location: Gold

**Organizers:** Drs. Mark Balas and James Steck

Quantum Information Systems and quantum computing are developing rapidly and will have a profound effect on Modeling, Operation, and Control of aerospace systems. Aerospace engineers need to be more aware of the new quantum systems as there is already a growing need for quantum systems engineers to deal with these new issues and to develop workable quantum machines and integrate them into the existing systems technology. In this session we will bring together prominent researchers currently working in communication and control of quantum systems and quantum computing.

Speakers: Dr. Matthew James, Australian National University; Dr. Valeri Ugrinovskii, University of New South Wales Canberra

Title: Applying Wiener Filtering to Quantum Communication Systems

Abstract: Quantum communication systems involve the transmission of classical and/or quantum information through a channel. Quantum key distribution is a well-known example, with significant security implications. Aspirational proposals for a quantum internet have been emerging, where a coherent network would allow the distribution of quantum states, including entangled states. Quantum signals, just like their classical counterparts, suffer loss and distortion as they pass through channels. This talk will examine the underlying problem of compensating for loss and distortion at a level below the abstraction of qubits and coding. In particular, we develop a general methodology that allows for the design of quantum filters that extends Wiener's well-known classical methods. This methodology involves a constrained nonlinear optimization problem, where the physical realization requirements of the filter impose non-trivial constraints. The talk will summarize the general features of the approach, and discuss some examples. Some recent experimental results will also be discussed.

Speakers: Dr. Ashkan Balouchi, Louisiana State University; Dr. Kurt Jacobs, University of Massachusetts Boston

Title: Coherent vs. Measurement-Based Feedback for Controlling A Single Qubit

Abstract: We compare the performance of continuous coherent feedback using a single-qubit controller to that of continuous measurement-based feedback for controlling a single qubit. Here the basic dynamical resource is the ability to couple the system to a traveling-wave field (for example, a transmission line) via a system observable. To obtain a fair comparison we acknowledge that the amplification involved in measurement-based control allows the controller to use macroscopic fields to apply feedback forces to the system, so it is natural to allow these feedback forces to be much larger than the mesoscopic coupling to the transmission line that mediates both the measurement for measurement-based control and the coupling to the mesoscopic controller for coherent control. Interestingly our numerical results indicate that under this assumption coherent feedback is able to exactly match the performance of measurement-based feedback given ideal controllers. We will also discuss various properties of, and control mechanisms for, coherent feedback networks.

**Speakers: Drs. Hideo Mabuchi, Edwin Ng** and **Ryotatsu Yanagimoto**, Edward L. Ginzton Laboratory, **Title:** Quantum Feedback and the Coherent Ising Machine

Stanford University; Dr. Tatsuhiro Onodera, NTT Physics & Informatics Laboratories

**Abstract:** The Coherent Ising Machine (CIM) computational architecture is being investigated as a promising hybrid opto-electronic approach for solving hard instances of nonlinear optimization problems. Large-scale prototypes have been built in industrial laboratories and are being benchmarked against both conventional heuristic algorithms and commercial quantum annealers; current academic research focuses on elucidating the fundamental role of quantum physics in the operational principles of CIM and on exploring generalizations of the CIM architecture that could more substantially leverage quantum resources such as entanglement and interference of optimization trajectories. In this talk I will overview of the key role of real-time feedback in current and future CIM architectures, discuss some quantum input-output modeling challenges for CIM-type systems operating with broadband optical signals, and describe a novel feedback-based scheme for entanglement generation in next-generation CIMs.

#### Speakers: Drs. Murphy Yuezhen Niu and Vadim Smelyanskiy, Google

Title: Multi-qubit Gate in Frequency Tunable Xmon Qubits

**Abstract:** We propose a framework for realizing Multi-qubit gate using top-down design harnessing the structure of the system Hamiltonian energy levels. This framework allows us to design three-qubit and four-qubit gates that are important for quantum simulation and quantum error correction. We discuss the main challenges to be overcome in the practical realization of here proposed multi-qubit gate.

Speakers: Drs. James Steck, Elizabeth Behrman, and Nathan Thompson, Wichita State University Title: Machine Learning for Programming Quantum Computers

**Abstract:** We apply machine learning to "program" quantum computers, both in simulation and in experimental hardware. A major difficulty in quantum computing is developing effective algorithms that can be programmed on a quantum device. Our approach is to apply machine learning to learn the quantum computer parameters that will yield the desired computation instead of choosing pre-made quantum gates to do the processing. As a proof of concept, we apply machine learning to a 16-qubit quantum gate computer developed by IBM and to a topological quantum computer by Microsoft. Preliminary results are shown of machine learning results both in software simulation and on the actual IBM quantum hardware. Microsoft

results are shown only using their simulation as hardware is still being built. A second demonstration is to then port quantum machine learning to a large SQUID array of 2000 qubits originally designed to solve binary optimization problems via quantum annealing. To demonstrate quantum machine learning on this larger scale, it is programmed via machine learning to anneal to various entangled and partially entangled states; investigating a basic building block of general quantum computing. Simulation results are presented along with a method to demonstrate in hardware on a superconducting flux qubit quantum annealing machine housed at the Quantum Artificial Intelligence Laboratory (QuAIL) at NASA's Advanced Supercomputing facility. Targeted entangled states are the relatively easy GHZ states, the EPR as well as the more difficult W and other states. Using machine learning instead of programming paves the way to greatly expanding the quantum computing capabilities of quantum computing hardware currently available.

#### Speaker: Dr. Mark Balas, Texas A&M University

Title: Reduction of Decoherence in Quantum Information Systems Using Direct Adaptive Control of Infinite Dimensional Systems

Abstract: Using Quantum Mechanical systems to store and retrieve information and use it in quantum computing is a new aspect of physical science. These quantum systems are inherently infinite dimensional systems and their dynamic behavior is not well known. What must be controlled, are the quantum gates that do all the computational work but should remain reversible because the gates are expected to be unitary operators in the Hilbert space of quantum system states. These gates will suffer some decoherence of this unitarity because they are open systems and subject to interaction/entanglement with other related quantum systems. Consequently, they will not operate as the ideal systems they are expected to be and will produce significant errors. Direct adaptive control does not use detailed information about the gates, but can still be used to reduce decoherence. Our overall direction is on using our research in adaptive control of infinite dimensional systems to explore how these feedback control ideas in conjunction with quantum gates and quantum error correction can reduce decoherence in quantum information and computing. It has been shown that there are decoherence -free subspaces in the Hilbert space of quantum states This presentation will focus on our current approach using adaptive control of infinite dimensional systems to guide quantum systems into these decoherence-free subspaces.

#### Getting Funded by NSF: Proposal Preparation and the Merit Review Process

**Sponsor:** National Science Foundation

**Time:** 4:00 PM – 6:00 PM, Thursday, July 2, 2020

**Location:** Denver

So, you think you have a great research idea, now how do you get funding from the National Science Foundation (NSF) to do the work? A well-scoped and written proposal is instrumental to successful submission. This session targets junior faculty and researchers who might be new to NSF and describes detailed guidelines and practical advice for proposal preparation. The presenter will go over NSF review process and Intellectual Merit and Broader Impacts criteria, as well as share most common mistakes made by the Primary Investigators when submitting a proposal. Question-and-answer session will follow the presentation.

**Dr. Irina Dolinskaya** is a Program Director at the National Science Foundation (NSF) in the Division of Civil, Mechanical & Manufacturing Innovation (CMMI). Dr. Dolinskaya services Dynamics, Control and Systems Diagnostics (DCSD) program, as well as National Robotics Initiative (NRI 2.0) and Navigating the New Arctic (NNA) NSF's 10 Big Ideas. Prior to joining NSF, Irina Dolinskaya was a faculty in the Industrial Engineering and Management Sciences department at Northwestern University. She obtained M.S. and Ph.D. degrees in Industrial and Operations Engineering from the University of Michigan, and B.S. degree in Industrial Engineering from the University of Florida.

Dr. Dolinskaya's research is in the field of transportation science and logistics with focus on adaptive modeling and solution approaches to integrate dynamic real-time information. Her current primary applications are in humanitarian logistics, optimal vessel performance, and electric vehicle routing. Irina Dolinskaya is the winner of the INFORMS Transportation Science & Logistics Society Dissertation Prize and the 2008 recipient of the Bonder Scholarship for Applied Operations Research in Military Applications.

#### **Student Career Advising Session**

**Time:** 4:00 PM – 5:30 PM, Thursday, July 2, 2020

Location: Gold

**Organizers**: Ning Tian, Ting Cai, Dr. Alireza Goshtasbi

The session will be rotating roundtable discussions. The discussion panel features a diverse group of accomplished professionals from academia, national labs and industry. They will share insights and provide advice based on their successful careers in their respective fields. Students are encouraged to come with specific questions or simply listen in. Join us for an opportunity to network and learn more about shaping your career. Light refreshments will be provided.

**Ning Tian** is a Ph.D. candidate working with Dr. Huazhen Fang at the University of Kansas, Lawrence, KS. His research interests include control theory and its application to advanced battery management. He is currently a Student Liaison of the ASME DSCD Energy Systems Technical Committee. He received the B.Eng. and M.Sc. degrees in Thermal Engineering from Northwestern Polytechnic University, Xi'an, China, in 2012 and 2015, respectively.

**Ting Cai** is a Ph.D. candidate working with Dr. Jason Siegel and Dr. Anna Stefanopoulou at the University of Michigan. His research focuses on Li-ion battery control and safety, specifically the modeling and detection of battery faults. He is a recipient of the Energy Systems Technical Committee Best Paper Award in the 2018 ASME Dynamic Systems and Control Conference. He currently serves as a student liaison of the ASME DSCD Energy Systems Technical Committee. Ting received his B.S. in Mechanical Engineering from Xi'an Jiaotong University in 2016.

**Dr. Alireza Goshtasbi** is a Research Engineer at Ford Motor Company. His research interests include modeling, estimation, and control of electrochemical energy systems with special focus on fuel cells. Alireza served as a Student Liaison for the ASME DSCD Energy Systems Technical Committee from 2017 to 2019. He completed his PhD in Mechanical Engineering at the University of Michigan in 2019, where he also obtained his MS in Applied Mathematics and MS in Mechanical Engineering in 2019 and 2016, respectively.

#### **Panelists:**

**Dr. Jason B. Siegel** received his Bachelors of Electrical Engineering Summa Cum Laude from the University of Michigan in 2004 and Electrical Engineering Systems Ph.D. in 2010. After a two year post-doc, he joined the faculty as an Assistant Research Scientist in the Department of Mechanical Engineering at the University of Michigan in 2012. His research focuses on physics based modeling and control of energy storage and conversion systems including lithium-ion batteries and Proton Exchange Membrane fuel cells. Dr. Siegel was part of the team that received the 2016 IEEE Control Systems

Technology Award, "for the development of an advanced battery management system accounting for electro-thermo-mechanical phenomena." He has co/authored more than 30 journal articles with an h-index of 16, and a chapter in the control systems handbook on the application of model predictive control to fuel cells. Dr. Siegel serves as the chair of the IEEE Technical Committee on Automotive Control.

**Dr. Hamid Ossareh** obtained his BASc in Electrical and Computer Engineering from the University of Toronto in 2008, and MASc (EE), MS (Mathematics), and PhD (EE) degrees from the University of Michigan, Ann Arbor in 2010, 2012, and 2013, respectively. He was a researcher at Ford Research and Advanced Engineering from 2013 to 2016, where he investigated advanced control of automotive powertrains. Since 2016, he has been an Assistant Professor in the Department of Electrical Engineering at the University of Vermont (UVM). His research interests lie in the area of control and,

more specifically, constrained control, stochastic control, and nonlinear control with applications in automotive, aerospace, and power systems. He holds more than 35 patents and has been an author on more than 32 peer-reviewed publications, and has been a recipient of numerous awards, including the Chief Engineer's award and the Ford Technical Achievement award from Ford Motor Company, and the Faculty of the Year and Inventor of the Year awards from the IEEE GMS. He is the founding chair of the IEEE Control Systems Society Chapter of Vermont, an Associate Editor for the journal of Control Engineering Practice, and a member on the Conference Editorial Board of the IEEE CSS.

**Dr. Helen Durand** is an Assistant Professor in the Department of Chemical Engineering and Materials Science at Wayne State University. She received her B.S. in Chemical Engineering from UCLA, and upon graduation joined the Materials & Processes Engineering Department as an engineer at Aerojet Rocketdyne for two and a half years. She earned her M.S. in Chemical Engineering from UCLA in 2014 and her Ph.D. in Chemical Engineering from UCLA in 2017, and subsequently started at Wayne State. She received the Air Force Office of Scientific Research Young Investigator award, and

her work has also received support from the National Science Foundation. She received a Faculty Research

Excellence Award within the College of Engineering at Wayne State University and is serving as the Next-Gen Manufacturing Sessions Area Chair for the 2020 Annual Meeting of the American Institute of Chemical Engineers. Her research interests are in the area of process systems engineering with a focus on process control.

**Dr. Neera Jain** is the Principal Investigator of the Jain Research Laboratory. She joined the School of Mechanical Engineering and Ray W. Herrick Laboratories at Purdue University as an assistant professor in January 2015. She has authored more than a dozen peer-reviewed articles on the topics of dynamic modeling and control of thermal energy systems. From May 2013 through May 2014, Dr. Jain was a visiting member of the research staff in the Mechatronics Group at Mitsubishi Electric Research Laboratories in Cambridge, MA where she designed advanced control algorithms for HVAC systems.

Before earning her doctorate in Mechanical Engineering at the University of Illinois at Urbana-Champaign in 2013, she earned her S.B. from the Massachusetts Institute of Technology in 2006 and her M.S. from the University of Illinois at Urbana-Champaign in 2009, both in Mechanical Engineering. Dr. Jain is a recipient of the Department of Energy Office of Science Graduate Fellowship (2010-2013) and the ASME Graduate Teaching Fellowship (2011-2012).

**Dr. Masoud Abbaszadeh** received the B.Sc. degree from the Amirkabir University of Technology, Tehran, Iran, in 2000, the M.Sc. degree from the Sharif University of Technology, Tehran, Iran, in 2002, and the Ph.D. degree from the University of Alberta, Edmonton, AB, Canada, in 2008, all in electrical and computer engineering. He is currently a Senior Research Engineer at GE Research, Niskayuna, NY, USA and an Adjunct Professor at the ECSE Department, Rensselaer Polytechnic Institute, Troy, NY, USA. From 2011 to 2013, he was a Senior Research Engineer at the United Technologies

Research Center, East Hartford, CT, USA. From 2008 to 2011, he was with Maplesoft, Waterloo, ON, Canada. He was the Principal Developer of MapleSim Control Design Toolbox and was a member of a research team working on Maplesoft-Toyota joint projects. Dr. Abbaszadeh is an Associate Editor of IEEE Transactions on Control Systems Technology and a member of IEEE Control Systems Society Conference Editorial Board. His current research interests include estimation and detection, robust and nonlinear filtering, and statistical machine learning with applications such as cyber-physical resilience and autonomous systems. He has published over 80 peer-reviewed papers and has over 40 issued/pending patents.

Mr. Rajiv Singh holds degrees in Aerospace (1998) and Mechanical (2000) Engineering and is currently a PhD candidate in Electrical Engineering at Northeastern University. His current research is focused on convex methods for nonlinear system identification. Since 2000, he has been with MathWorks where he leads the development of data based modeling software. He has been the lead developer of the System Identification Toolbox since 2010. He has also led the development effort behind launching the Predictive Maintenance Toolbox in 2018. Rajiv has authored numerous papers in the area of system identification and statistical modeling and hold 3 patents in related areas.

**Dr. Leo H. Chiang** is Technology Director at Dow Inc., leading Chemometrics and AI implementations for Manufacturing. Leo has developed and implemented several data analytics techniques to solve complex manufacturing problems, resulting in 11 Dow Manufacturing Technology Center Awards. In 2016 he received the Dow R&D Excellence in Science Award in recognition of his scientific achievement in industrial research. Leo has a B.S. degree from University of Wisconsin at Madison and M.S. and Ph.D. degrees from the University of Illinois at Urbana-Champaign, all in Chemical Engineering. Leo has contributed to over 40 externally refereed journal/proceedings

papers and has given over 100 conference presentations and university lectures. Leo has co-authored two books published by Springer Verlag. His textbook Fault Detection and Diagnosis in Industrial Systems is available in English and Chinese and has received over 2,200 citations according to Google Scholar.

Leo has a long history of supporting American Institute of Chemical Engineers (AIChE), having served as 2014-2016 Computing and Systems Technology (CAST) director, 2016 CAST 10E programming chair, 2017-2018 spring meeting program chair (MPC), and recently elected to serve the 2019-2022 Executive Board of the Program Committee (EBPC). Leo was instrumental in setting up the Big Data Analytics Topical Conference (2015 to 2017) and Industry 4.0 Topical Conference (2018-2020) at the AIChE spring meeting. He was recognized by the AIChE with the 2016 Herbert Epstein Award for his leadership on Big Data Analytics technical programming and 2016 Computing Practice Award for his world-class leadership in the development and application of methodologies in analytics for batch and continuous processes known as Big Data. Leo is also active in the broader engineering and control community, currently serves as 2019-2021 Computer Aids for Chemical Engineering (CACHE) trustee, 2021 International Symposium on Advanced Control of Chemical Processes (ADCHEM) industry co-chair, and 2022 American Control Conference (ACC) vice chair for industrial applications.

**Dr. Jennifer King (Annoni)** received her PhD in Aerospace Engineering and Mechanics from the University of Minnesota in 2016. She is currently a research engineer at the National Renewable Energy Lab (NREL) at the National Wind Technology Center. Her research spans from engineering to policy. Her expertise includes control systems, flow control, system identification, and reduced-order modeling with application to wind farm control, with specific work done on mode decomposition, optimal estimation and control, robust control, and energy policy.

**Dr. Alexander Scheinker** received a MA in mathematics in 2008 and a PhD in nonlinear adaptive control theory in 2012 at the University of California, San Diego. Alex spent the last two years of his PhD as a Graduate Researcher at Los Alamos National Laboratory (LANL) and was hired as a staff member with the RF Control Group in 2011 where he continues theoretical and applied control theory research. While traditional Extremum Seeking (ES) approaches were for the optimization of the unknown outputs of known stable/controlled systems, Alex developed a new bounded form of ES for use

as a direct feedback for the stabilization, optimization and control of unknown and unstable time-varying nonlinear systems. Alex has combined the ES feedback control method with machine learning (ML) techniques for adaptive ML of time varying systems. Alex has demonstrated this method in hardware for various particle accelerator applications: electron beam orbit control at the SLAC National Accelerator Laboratory SPEAR3 and the Brookhaven National Laboratory NSLS-II particle accelerator light sources,

beam loss minimization at the LANL LANSCE proton linear accelerator, automatic longitudinal phase space control and average pulse energy output maximization at the SLAC National Accelerator Laboratory Linac Coherent Light Source and the European X-ray free electron laser, trajectory and emittance control at CERN's plasma wakefield acceleration project AWAKE, and non-invasive longitudinal phase space diagnostics at the FACET plasma wakefield accelerator at SLAC national accelerator laboratory.

**Dr. David Schoenwald** is a Principal Member of the Technical Staff in the Electric Power Systems Research Department at Sandia National Laboratories. Dr. Schoenwald focuses on control system design to improve dynamic stability of electric power systems. He also develops performance standards for grid-scale energy storage applications. Before joining Sandia, he was with Oak Ridge National Laboratory, where he designed control systems for manufacturing applications. He was also an adjunct assistant professor in the Electrical Engineering Department, University of Tennessee, Knoxville,

where he taught a graduate course on nonlinear control systems. Dr. Schoenwald received an R&D 100 award in 2017 for development of an inter-area oscillation damping controller for the western North American power grid. He received the 2017 Outstanding Engineer Award of the Albuquerque Section of the IEEE. He served as Technical Co-Chair of the 2017 Electrical Energy Storage Applications & Technologies (EESAT) Conference. Dr. Schoenwald received his Ph.D. degree in electrical engineering from The Ohio State University.

STUDENT PROGRAMS ACC 2020

#### STUDENT PROGRAMS

The ACC supports students in a variety of ways. Students are offered lower registration rates and lower hotel room rates (for a limited room block). The ACC also coordinates a conference-wide Student Best Paper Award and provides Student Travel Grants.

#### STUDENT BEST PAPER AWARD

The 2020 ACC is pleased to continue the tradition of the Student Best Paper Award. All primary, first-listed authors of a regular contributed paper who were students at the time of submission were eligible. To be considered for the award, a blind version of the paper was nominated by the student's advisor. The nominated papers were reviewed by a special committee convened for the best study paper award competition. Based on these reviews, the following five papers were selected as finalists for the Student Best Paper Award competition.

- "Homotopy Method for Finding the Global Solution of Post-Contingency Optimal Power Flow." SangWoo Park\*, Elizabeth Glista, Javad Lavaei, Somayeh Sojoudi
- "Accuracy Prevents Robustness in Perception-based Control." Abed AlRahman Al Makdah\*, Vaibhav Katewa, Fabio Pasqualetti
- "Coordinated Control of UAVs for Human-Centered Active Sensing of Wildfires." Esmaeil Seraj\*, Matthew Gombolay
- "Carrots or Sticks? The Effectiveness of Subsidies and Tolls in Congestion." Bryce L. Ferguson\*, Philip N. Brown, Jason R. Marden
- "A fully distributed motion coordination strategy for multi-robot systems with local information." Pian Yu\*, Dimos V. Dimarogonas

The finalist papers will be presented on Wednesday, July 1<sup>st</sup>. The winner will be selected by the Best Student Paper Awards Committee and will be presented at the ACC Awards Ceremony on Friday, July 3<sup>rd</sup>, 2020.

#### STUDENT TRAVEL GRANTS

The 2020 American Control Conference Organizing Committee is pleased to provide student support for students registering for the virtual ACC 2020. The 2020 ACC thanks the generous sponsors who make this support possible. The option for student support was outlined on the website and sent in an email to all authors of papers accepted for the conference.

The application for student registration was made available on the 2020 ACC web site. Student eligibility conditions for support included the student status at the submission deadline (September 2019) and student registration for the conference. Support awards were in the form of complimentary student conference registration (\$75).

For more information, please contact Prof. Kira Barton (<u>bartonkl@umich.edu</u>), ACC 2020 Vice Chair for Student Affairs.

#### **TUTORIAL SESSIONS**

Tutorial sessions showcase specific control topics that address real world control applications and how effective solutions are engineered by practicing engineers. This year we are pleased to offer four tutorial sessions.

#### **WeB21** Cooperation in Pursuit-evasion Differential Games

Organizer: Eloy Garcia, Chair of IEEE Technical Committee on Manufacturing Automation and

Robotic Control (MARC), Control Science Center of Excellence, Air Force Research

Laboratory, Wright-Patterson AFB

Co-organizers: Isaac E. Weintraub, Aerospace Systems Directorate, Air Force Research Laboratory,

Wright-Patterson AFB

Meir Pachter, Department of Electrical Engineering, Air Force Institute of Technology,

Wright-Patterson AFB

**Time:** 13:30 – 15:30, Wednesday, July 1, 2020

**Location:** Director's Row H

This session will introduce the basics of pursuit-evasion problems. Pursuit-evasion problems provide a general framework that mathematically formalizes important applications in different areas such as surveillance, navigation, analysis of biological behaviors, and conflict and combat operations. Pursuit-evasion sets up two players or autonomous agents against each other; generalizations are typical in the sense of multiple players divided into two teams – the pursuer team against the evader team.

Strategy seeking in pursuit-evasion has been approached by imposing certain assumptions on the behavior of one player or team. However, many pursuit-evasion scenarios must address the presence of an intelligent adversary which does not abide by a restricted set of actions. The desire to design strategies that optimize a certain criteria against the worst possible actions of the opponent and that also provide robustness with respect to all possible behaviors implementable by the adversary led to the emergence of differential game theory. The central problem in pursuit evasion differential games is the synthesis of saddle-point strategies that provide guaranteed performance for each team regardless of the actual strategies implemented by the adversary. This is a challenging problem as it generalizes optimal control to simultaneously minimize and maximize a performance functional while satisfying implicit robustness requirements. Many questions and open problems remain in this area where the controls community has the potential for important breakthroughs and take differential games a leap forward both in theoretical and practical terms.

Presenters: Isaac E. Weintraub, Meir Pachter, and Eloy Garcia: An introduction to pursuit-

evasion differential games

Shaunak D. Bopardikar: k-Capture in Multi-agent Pursuit Evasion, or the Lion and

the Hyenas

Meir Pachter: Multi-Player Pursuit-Evasion Differential Games

Zachariah Fuchs: Singular Surfaces within a Two Evader, One Pursuer Game

#### ThB21 Control of Tokamak Fusion Plasmas

**Organizers:** Michael L. Walker, General Atomics

Co-organizers: Federico Felici, EPFL

Eugenio Schuster, Lehigh University

Peter De Vries, ITER

**Time:** 13:30 – 15:30, Thursday, July 2, 2020

**Location:** Director's Row H

Significant progress has been made in the last several decades since controlled magnetic fusion was envisioned as a potential commercial power source. The effort initially focused on achieving the necessary scientific understanding of fusion plasmas, and how best to produce energy generating fusion reactions within those plasmas. But as greater scientific understanding was gained, more attention gradually began to be paid to the technological issues associated with confining and controlling the plasmas creating these energy-producing reactions. Initial active control approaches consisted primarily of a small number of SISO PID controllers. More recently, as the number of plasma parameters desired to be controlled has increased, more sophisticated controllers have been designed, implemented, and tested on a number of experimental fusion devices worldwide.

Up to now, magnetic-fusion research devices have not been capable of hosting a plasma with the frequency of fusion reactions sufficient to produce more output power than is consumed in confining and controlling the plasma, a basic requirement for an energy-producing fusion reactor. This situation is about to change with the anticipated completion of the ITER tokamak currently under construction in southern France. ITER is projected to be able to produce approximately 10 times more energy output than it consumes when it is fully operational in approximately 20 years. Early operation of ITER will focus on learning how to produce and control plasmas that are far more energetic than in any existing magnetic-confinement device. The initial plasma control system is being designed now, including both the software architecture and the algorithms that will be used for control during ITER "first plasma" operation in approximately 2025. Energy content of plasmas produced during this phase of operation are small when compared with plasmas planned for later operation phases, which means that consequences of most possible control failures are similarly small. However, even during this early phase there are certain control failures that can lead to millions of dollars in device damage, so getting the control right is an important task.

Presenters: Michael Walker, Introduction to Tokamak Plasma Control

Federico Felici, Control of magnetic fields and instabilities in tokamak fusion

plasmas

Eugenio Schuster, Core Kinetic and Magnetic Control in Tokamak Plasmas Peter De Vries, Exception handling by the Plasma Control Systems of Tokamaks

#### ThC21 Control of Wafer Scanner: Methods and Developments

Chair: Marcel Heertjes, Eindhoven University of Technology
Organizer: Marcel Heertjes, Eindhoven University of Technology

Co-organizers: Hans Butler, ASML

Stan van der Meulen, ASML Rahul Ahlawat, CYMER

**Time:** 16:00 – 18:00, Thursday, July 2, 2020

**Location:** Director's Row H

This tutorial session addresses control design aspects for wafer scanners, used in the semiconductor manufacturing industry, and the challenges for control design and development to meet the ever increasing demands on accuracy and speed. The mechatronic systems that will be discussed are: (a) the light source needed to generate the ultraviolet light that is used for wafer exposure, (b) the optical and metrology systems needed for accurate measurement and imaging, and (c) the reticle and wafer stage systems needed for accurate and fast positioning. The control challenges associated with these systems mainly involve dealing with: (a) rejection of high frequency aliased disturbances, (b) large-scale or fast-updated (state) reconstruction, (c) vibration control and isolation in view of structural vibrations and disturbances, (d) inherent design tradeoffs like Bode's sensitivity integral and gain-phase relationship, (e) multivariable plant identification of (quasi-static) deformations and structural dynamics for point-of-interest control, and (f) thermal modelling, model reduction, and the control of (local) time-varying deformation.

**Presenters:** Marcel Heertjes: **General introduction wafer scanners** 

Rahul Ahlawat: Light source: generation and control of light Hans Butler: Optics: Isolation and control of vibration

Marcel Heertjes: Stages pt.1: control of motion

Stan van der Meulen: Stages pt.2: control of thermal-induced deformation

#### FrB21 Learning and Control: Opportunities and Challenges

Chair: Mathukumalli Vidyasagar, Indian Institute of Technology, Hyderabad

**Organizer:** Mathukumalli Vidyasagar

Co-organizer: Behrouz Touri, University of California San Diego

**Time:** 13:30 – 15:30, Friday, July 3, 2020

**Location:** Director's Row H

The recent past has witnessed an explosion of activity in Artificial Intelligence (AI) and Machine Learning (ML). AI/ML is easily the most "disruptive" technology of contemporary society. Yet much of

the claimed progress rests on simulations that are not always repeatable, or fragile against small perturbations in parameters, or both. Consequently, the AI/ML community has begun to show some interest in developing some theoretical foundations for the subject. In response to this, the organizers of this tutorial session propose a session consisting of three forty-minute talks, all of them by leading experts in control and system theory who have also made substantial contributions to learning. The objectives of the session are:

- To give the audience a sense of the opportunities for persons trained in control and system theory to contribute to the growth of AI/ML.
- To give a glimpse of the research frontier in these areas that can be successfully tackled using control / system theory, or allied approaches.

**Presenters:** Mathukumalli Vidyasagar, **Mathematical foundations of deep and reinforcement learning** 

George Pappas and Manfred Morari, Robustness analysis of neural networks via semidefinite programming

Pramod Khargonekar, Neuro-cognitive science inspired learning control architectures and algorithms

#### WORKSHOPS

The ACC will offer workshops addressing current and future topics in automatic control from experts in academia, national laboratories, and industry. The workshops at ACC 2020 will take place prior to the conference on Monday June 29 and Tuesday June 30.

Conference registrants can sign up for the workshops directly through the <u>registration site</u>. *Please note that workshops are subject to cancellation due to lack of registrants*.

#### System Modeling and Control with Smooth Fuzzy Compositions

Half day (8:30am - 12:30pm)

Organizer: Ebrahim Navid Sadjadi, Universidad Carlos III de Madrid

**Location:** Room 26

The objective of this half-day workshop is to cover the state-of-the-art in smooth fuzzy modeling and applications. properties algorithms along their systemic and During the last years, we have witnessed major successes of fuzzy logic systems in the academia and industries. From beating professionals at games like chess, to fast detection of diseases like cancer, classification of complex images, and generation of captions for images in the personalized media of the incomplete and noisy information. In many AI fields, fuzzy systems could outperform all existing machine learning and model-based control methods. Three major aspects of fuzzy systems make the design methodology attractive. The first is the design formulation, that they can be understood, tuned, or improved by engineer's experiences and knowledge. The second aspect is the ability to handle the system disturbances and noises soft and smoothly, which facilitate the operation of industrial processes inside their margins and operational limits. The third aspect is the ability to perform on-line decision making for the processes, considering their affordable computational complexities. Hence, the purpose of providing this workshop is to provide a detailed introduction to the fundamental developments in this field for researchers, graduate students and practitioners. The main focus of the course is on the design of smooth fuzzy models for various applications which include control, modelling, and self-learning for the dynamical systems, as well as the comprehensive study of the new achievement in study of their structural properties.

Presenters: E. N. Sadjadi, Universidad Carlos III de Madrid; M. B. Menhaj, Amirkabir University of Technology

*Prerequisite skills for participants:* Linear algebra and basic knowledge of optimization and stabilization theories. No knowledge of fuzzy logic is required.

### Secure State Estimation and Control of Cyber Physical Systems: An Unknown Input Observer Approach

Half day (1:30pm - 5:30pm)

**Organizers**: Stefen Hui, San Diego State University

Stanislaw Zak, Purdue University

**Location:** Room 27

In this workshop, the theory, design, and applications of estimators for the states and unknown inputs of control systems will be presented in a tutorial fashion. The workshop targets both practicing engineers and graduate students. The emphasis will be on design in order to show how uncertain system control theory fits into practical applications. Observation and measurement play essential roles in achieving control objectives in many control schemes. An observer is a deterministic dynamical system that can generate an estimate of the plant's states using that plant's inputs and outputs. Observers are utilized to augment or replace sensors in a control system. The early observers required full knowledge of the inputs of the controlled plant. Observers that do not require full knowledge of the inputs have also been developed and are collectively called Unknown Input Observers (UIO). Some uncertainties, nonlinearities, and delays in the system model can be treated as unknown inputs. Methods for the estimation of the unknown inputs have been developed. One important application of UIOs of current interest is in secure state estimation of network control systems corrupted by malicious packet drops both in the communication between the sensors and the controller and that between the controller and the actuators. Another area of application of UIOs is fault detection and isolation, which is also one of the topics of this workshop. We will present an unknown input estimator architecture that reconstructs sensor and actuator faults. Novel robust discretetime (DT) observer architectures will also be presented. We will demonstrate how these observers are used in the synthesis of combined controller-observer compensators for continuous-time (CT) systems. The advantage of the compensator synthesis in the DT domain over the CT domain is that in many cases the condition for the existence of an UIO fails for a CT plant model while it holds for a discretized plant model. We will characterize a class of systems for which the existence condition for the UIO fails in the CT domain while it holds in the DT domain.

*Prerequisite skills for participants:* Basic knowledge of linear systems at the undergraduate level. No prior knowledge of observers is assumed.

#### **Current Topics in Aerospace Control**

Full day (8:30am - 5:30pm)

**Organizers:** Richard A. Hull, Collins Aerospace

Naira Hovakimyan, University of Illinois Zhihua Qu, University of Central Florida Ilya V. Kolmanovsky, University of Michigan Heather Hussain, The Boeing Company Venanzio Cichella, University of Iowa Dimitra Panagou, University of Michigan Amit Sanyal, Syracuse University

D. Brett Ridgely, Raytheon Missile Systems

**Location:** Room 28

This one-day workshop will focus on current control system topics that are having an impact in the aerospace industry. The workshop will be presented by leading control systems experts from industry and academia that are involved in some of the most exciting research and development efforts in the field of Aerospace. This workshop is intended for students and professors in search of current applications in need of solutions as well as industry and government professionals interested in potential solutions from

academia and adjacent branches of the aerospace industry. This workshop is sponsored and presented by members of the IEEE CSS Technical Committee on Aerospace Controls and their collaborators. The purpose of the technical committee is to help build an international scientific community and promote awareness of outstanding achievements in the field of Aerospace Controls. In this offering, the workshop will present a sample of current topics related to the intelligent control of cooperating groups of unmanned air vehicles, spacecraft, drones and miniature projectiles. Our experts will present the theoretical background, rigorous methods and experimental results that are creating an exciting new chapter in field of Aerospace Control. Recent advances in adaptive and nonlinear robust control theory are used to form the basis for safe, resilient and certifiable systems of co-operative platforms. Future directions for research are included in discussion of the roles of artificial intelligence and augmented and virtual reality, as well as emerging applications in Aerospace Control for adversarially robust cyber resistant systems. The workshop will offer opportunities for questions and answers and provide an open forum for discussion of applications for current theoretical advances and potential enabling technologies.

Please see http://aerospace-controls.ieeecss.org/home for additional information and agenda, follow the tab to TCAC Workshop on Aerospace Control – 2020 ACC.

*Presenters*: Richard A. Hull, Collins Aerospace; Naira Hovakimyan, University of Illinois; Zhihua Qu, University of Central Florida; Ilya V. Kolmanovsky, University of Michigan; Heather Hussain, The Boeing Company; Venanzio Cichella, University of Iowa; Dimitra Panagou, University of Michigan; Amit Sanyal, Syracuse University; D. Brett Ridgely, Raytheon Missile Systems; James Fisher, Raytheon Missile Systems

Prerequisite skills for participants: Solid foundation in classical and modern control methods plus an interest in Aerospace applications.

#### **Practical Methods for Real World Control Systems**

Full day (8:30am - 5:30pm)

**Organizers**: Daniel Abramovitch, Agilent Technologies

Sean Andersson, Boston University

Craig Buhr, Mathworks

**Location:** Room 29

A question one should ask of any advanced algorithm is, "How do we make that work in a real system?" A question one should ask of any industrial control system is, "How do we apply better algorithms to this problem?" The two questions are dual sides of the same "bridging the gap" problem that has hounded control for decades. This workshop will examine practical methods that address this problem from both sides: ways to implement advanced algorithms on real systems and ways to improve industrial control using advanced methods. We will examine which system identification methods work on which physical systems, as model-based control requires a model. We will discuss why so many industrial controllers are PIDs, present a universal framework for different PID implementations, describe how to tune the PID to the identified system model, and show how to augment these with higher order controller dynamics (a.k.a. filters). We will discuss how to make state-space models more useable in real-time systems. Speaking of which, we will explain how to program filters and PIDs in real-time control systems. We will discuss things to know about hardware implementation and tradeoffs with ADCs, DACs, and analog filters. We will talk

about the current set of real-time processing chips and the programming models that go along with them. Throughout we will offer hardware/software demonstrations of how tools like Matlab and Simulink can be used in these contexts. We won't bridge the gap in a day, but we can move the needle. A web page that holds the information from the brochure can be found <a href="here">here</a>, and a PDF version of the workshop flyer can be found <a href=here</a>.

*Prerequisites skills for participants*: Undergraduate level knowledge of feedback systems, sampled data systems, and programming. An honest interest in being able to translate control theory into physical control systems. The workshop is designed to be useful to industry practitioners wishing to apply more advanced control methods as well as academics wishing to make their algorithms more applicable to real world problems.

#### **Confluence of Vision and Control**

Full day (8:30am - 5:30pm)

**Organizers:** Ashwin Dani, University of Connecticut

Nicholas Gans, University of Texas at Arlington

**Location**: Room 30

The use of visual sensors in feedback control has been an active topic of research for decades. As the cost of hardware lowers and computational capabilities increase, vision-based control is reaching new levels of capability and application. Recent innovations in computer vision can provide greater capabilities to control applications such as autonomous vehicles and robots. At the same time, open problems in computer vision can be solved through control theory, such as nonlinear and adaptive control. We present eleven discussions on recent work in vision-based control, the application of control to computer vision, and topics in which vision and control are uniquely intertwined. We seek to highlight recent developments and open problems that exist at the intersection of vision and control and spur further research and development in the community. Further information the workshop be found https://sites.google.com/view/2020accworkshop.

Presenters: Randy Beard, Brigham Young University; Ashwin Dani, University of Connecticut; Warren Dixon, University of Florida; Kaveh Fathian, Massachusetts Institute of Technology; Nicholas Gans, University of Texas at Arlington; Takeshi Hatanaka, Osaka University; Guoqiang Hu, Nanyang Technological University; Romeil Sandhu, Stony Brook University; Roberto Tron, Boston University; Eddie Tunstel, University of New Mexico; Patricio Vela, Georgia Institute of Technology.

*Prerequisites skills for participants*: A basic understanding of vision-based control/estimation, nonlinear and adaptive control is beneficial. For the registrants who do not have sufficient background in these topics, basic tutorial material will be provided prior to the workshop.

## Exploring Interplay between Dynamical Systems and Function Spaces: A Unifying Presentation of Dynamics Mode Decomposition and Occupation Measures

Full day (8:30am - 5:30pm)

**Organizers:** Rushikesh Kamalapurkar, Oklahoma State University

Joel A. Rosenfeld, University of South Florida

**Location:** Room 31

Two different perspectives of casting problems for finite dimensional nonlinear dynamical systems into infinite dimensional linear problems have been gaining significant traction over the past decade. Specifically, these two approaches are that of Dynamic Mode Decomposition (DMD), which aims to establish "equation-free" models from snapshots of a dynamical system by exploiting properties of the Koopman operators over Hilbert function spaces, and that of Liouville operators and occupation kernels, where nonlinear optimal control problems are reformulated as infinite dimensional linear programs. The purpose of this workshop is to bring together practitioners of both fields together to enable a unifying discourse concerning nonlinear dynamical systems and their connections to infinite dimensional spaces. The presentations will include topics such as DMD, moment problems, Reproducing Kernel Hilbert spaces, and Lyapunov measures. The workshop will conclude with several talks connecting DMD with Liouville operators using newly introduced occupation kernels. This workshop aims to provide a comprehensive treatment of Dynamic Mode Decompositions and moment problems using Occupation Measures. The attendees will leave with a thorough understanding of how to cast finite dimensional nonlinear problems into infinite dimensional linear problems and will understand this approach from multiple perspectives. Attendees who are already familiar with both methods will be introduced to occupation kernels and Liouville operators which can be leveraged to blend DMD with the theory of occupation measures via a Reproducing Kernel Hilbert Space framework.

*Presenters*: Rushikesh Kamalapurkar, Oklahoma State University; Henning Lange, University of Washington; Jean B. Lasserre, LAAS-CNRS; Joel A. Rosenfeld, University of South Florida; Benjamin P. Russo, Farmingdale State College; Umesh Vaidya, Iowa State University; Ram Vasudevan, University of Michigan.

Prerequisite skills for participants: Experience with Banach and Hilbert space theory, including measure theory, kernel spaces, and operators as well as some experience with dynamic programming and optimization.

#### **Extremum Seeking Control in Biomedical Applications**

Full day (8:30am - 5:30pm)

**Organizers:** Nicholas Gans, University of Texas at Arlington

Saurav Kumar, University of Texas at Dallas

Robert Gregg, University of Michigan

**Location:** Room 32

Biomedical systems are notoriously difficult to model. This difficulty stems from the variation in physiology between subjects. Furthermore, an individual subject will often vary over the course of a day, a week, etc. This difficulty in modeling makes it difficult to implement optimal control solutions. Extremum Seeking Control (ESC) is a method of model-free adaptive control that modifies the arguments of a cost function to guide them to a local maximum or minimum. The versatility and model-free nature of ESC makes them very well suited for biomedical control applications. We will present nine recent results in applying ESC to a wide variety of biomedical problems, including powered prosthetics and orthotics, medication delivery, rehabilitation therapy, and assistive heart pumps. We seek to highlight the strengths of ESC in biomedical applications and spur further research and development in the community who may not have considered this powerful approach. The workshop will include an introductory session for those unfamiliar with ESC, and we will provide tutorial papers on the workshop webpage, https://sites.google.com/view/esc4biomed.

Presenters: Victor Duenas, Syracuse University; Hosam Fathy, University of Maryland; Nicholas Gans, University of Texas at Arlington; Robert Gregg, University of Michigan; Martin Guay, Queen's University; Saurav Kumar, University of Texas at Dallas; Peiman Naseradinmousavi, San Diego State University; Miroslav Krstic, University of California San Diego; Tiago Roux Oliveira, State University of Rio de Janeiro; Yan Ting, University of Melbourne.

*Prerequisite skills for participants:* A general knowledge of adaptive and nonlinear control will be helpful. The workshop will include an introductory session for those unfamiliar with ESC, and we will provide tutorial papers on the workshop webpage.

#### Task-Oriented Autonomous Vehicular and/or Manufacturing Operations

Full day (8:30am – 5:30pm)

**Organizers:** Xiang Chen, University of Windsor

Jay A. Farrell, University of California Riverside Kok-Meng Lee, Georgia Institute of Technology Fumin Zhang, Georgia Institute of Technology

**Location:** Room 33

This one-day workshop will focus on major problems facing the design framework for autonomous vehicular and manufacturing operation, involving the following topics:

- Modeling field sensing and perception such as visual, LIDAR, and soft sensor based on
- deformation and temperature field reconstruction,
- Smart actuator based on modular design and embedded field sensors,
- Visual sensor guided autonomous vehicular formation operations,
- Networked sensing and estimation for ground and underwater autonomous vehicular systems,
- Task-oriented autonomous unmanned aerial vehicular operations.

The presented talks by invited speakers are to provide updates of frontiers in these topics and to collectively present the design philosophy of task-oriented autonomous operations seen in vehicular and manufacturing systems.

*Presenters*: Kun Bai, Huazhong University of Science and Technology; Xiang Chen, University of Windsor; Jay Farrell, University of California Riverside; Jingjing Ji, Huazhong University of Science and Technology; Kok-Meng Lee, Georgia Institute of Technology; Hugh H. T. Liu, University of Toronto; Fumin Zhang, Georgia Institute of Technology.

Prerequisite skills for participants: Background in one or more areas of estimation, control, optimization, UAV, robotics, and field (visual, thermal, laser, etc.) sensing is preferred but not mandatory. Anyone interested in autonomous systems and operations is welcome to participate.

DAILY OVERVIEW ACC 2020

# **Thursday Overview**

Time	Key Events
08:00 - 09:00	Plenary Session (see <i>Plenary Sessions</i> )
	"Control of Complex Energy and Power Systems for Electrified Mobility," Andrew
	Alleyne, University of Illinois at Urbana-Champaign (Ballroom 1)
09:00-09:30	Late Breaking Poster Session (Ballroom 1)
09:00-09:30	Coffee Break (See online program for details)
09:30-11:45	Rapid Interactive Sessions
12:00-13:30	Noon Special Sessions (see Special Sessions)
	• Control Design for SuperCruise Automated Driving: Systems, Algorithms,
	Challenges and Solutions (General Motors)
	• Bridging the Theory-Practice Gap in Robotics on a Massive Scale in Georgia
	Tech's Robotarium (Mathworks)
13:30 - 15:30	Mid-Day Technical Sessions
13:30 - 15:30	Mid-Day Special Sessions (see Special Sessions)
	• Promoting Access for Underrepresented Groups in STEM Graduate Disciplines
	Quantum Information Systems: Communication, Control and Computing
15:30 – 16:00	Coffee Break (See online program for details)
16:00 - 18:00	Late Afternoon Technical Sessions
16:00 - 18:00	Late Afternoon Evening Sessions (see Special Sessions)
	Getting Funded by NSF: Proposal Preparation and the Merit Review Process
	Student Career Advising

# Friday Overview

Time	Key Events
08:00-09:00	Plenary Session (see <i>Plenary Sessions</i> )
	"Distributed Decision Making in Network Systems: Algorithms, Fundamental
	Limits, and Applications," Na Li, Harvard University (Ballroom 1)
09:00-09:30	Late Breaking Poster Session (Ballroom 1)
09:00-09:30	Coffee Break (See online program for details)
09:30 - 11:45	Rapid Interactive Sessions
12:00 - 13:30	ACC Awards Ceremony (Ballroom 1)
13:30 – 15:30	Mid-Day Technical Sessions
15:30 – 16:00	Coffee Break (See online program for details)
16:00 - 18:00	Late Afternoon Technical Sessions
18:30 - 19:30	Closing Reception

2020 American Control Conference

TECHNICAL PROGRAM

**Program at a Glance** 

# ACC 2020 Technical Program Tuesday June 30, 2020

Track T2	07:00-18:00 TuWT2	Meetings	TuWT2	
 Track T1	07:00-18:00 TuWT1	Workshops	Workshops	

18:15-19:15 TuP1
Ballroom 1
Control Challenges for the Laser Interferometer Gravitational-Wave Observatory (LIGO)

ACC 2020 Technical Program Wednesday July 1, 2020

TECHNICAL PROGRAM

**Detailed Program Listing** 

## **Detailed Program Listing**

### Technical Program for Tuesday June 30, 2020

TuWT1 Workshops (Tutorial Session)	Workshops
07:00-18:00	TuWT1.1
W1: System Modeling and Compositions, pp. 1-1.	Control with Smooth Fuzzy
Sadjadi, Ebrahim Navid	Carlos II
07:00-18:00	TuWT1.2
	on and Control of Cyber Physical ut Observer Approach, pp. 2-2.
Hui, Stefen	San Diego State University
Zak, Stanislaw H.	Purdue Univ
07:00-18:00	TuWT1.3
W3: Current Topics in Aero	ospace Control, pp. 3-3.
Hull, Richard A.	Collins Aerospace
Hovakimyan, Naira	University of Illinois at Urbana- Champaigr
Qu, Zhihua	Univ. of Central Florida
Kolmanovsky, Ilya V.	The University of Michigar
Hussain, Heather	MIT
Cichella, Venanzio	University of Iowa
Panagou, Dimitra	University of Michigan, Ann Arbo
Sanyal, Amit	Syracuse University
Ridgely, D. Brett	Raytheon Missile Systems
07:00-18:00	TuWT1.4
4.	Real World Control Systems, pp. 4-
Abramovitch, Daniel Y.	Agilent Technologies
Andersson, Sean B.	Boston University
Buhr, Craig	The MathWorks
07:00-18:00	TuWT1.5
W6: Confluence of Vision a	
Dani, Ashwin	University of Connecticu
Gans, Nicholas	University of Texas at Arlingtor
07:00-18:00	TuWT1.6
	tween Dynamical Systems and g Presentation of Dynamics Mode ation Measures, pp. 6-6.
Kamalapurkar, Rushikesh	Oklahoma State University
Rosenfeld, Joel A.	University of South Florida
07:00-18:00	TuWT1.7
W8: Extremum Seeking Copp. 7-7.	entrol in Biomedical Applications,
Gans, Nicholas	University of Texas at Arlingtor
Kumar, Saurav	University of Texas at Dallas
Gregg, Robert D.	University of Michigar
07:00-18:00	TuWT1.8
W9: Task-Oriented Autono. Manufacturing Operations,	
Chen, Xiang	University of Windso
Farrell, Jay A.	University of California Riverside
1 14 1 14	

Georgia Inst. of Tech

Lee, Kok-Meng

Zhang, Fumin Georgia Institute of Technology

TuWT2	Meetings	
TuWT2 (Special Session)		
07:00-18:00	TuWT2.1	
Meeting: Board of Governors	(from 12Noon to 5pm), pp. 9-9.	
Cortes, Jorge	University of California, San Diego	
07:00-18:00	TuWT2.2	
Meeting: ASME DSCD ExComm Meeting (from 1.30pm to 5.30pm), pp. 10-10.		
Yi, Jingang	Rutgers University	
TuP1	Ballroom 1	
Control Challenges for the Lase Wave Observatory (LIGO) (Plen		
Chair: Borrello, Michael A.	Philips Healthcare	
18:15-19:15	TuP1.1	
Control Challenges for the Las Gravitational-Wave Observato		

Caltech

Coyne, Dennis

WeP11	Ballroom 1	WeLBP-A02	ACC Sponsors
Lots to Be Done: Towards I		Meeting Space-WeA	
	nat Scale Up (Plenary Session)	09:00-09:30	WeLBP-A02.1
Chair: Devasia, Santosh	Univ of Washington	Gold Sponsor: General Moto	prs, pp. 20-20.
08:00-09:00	WeP11.1	Eckman, Wendy	General Motors
Lots to Be Done: Towards Coordination Algorithms 1	Data-Informed, Real-Time	09:00-09:30	WeLBP-A02.2
Martinez, Sonia	University of California at San	Gold Sponsor: Mathworks, p	p. 21-21.
Martinez, Coma	Diego	Rose, Jennifer	MathWorks
		Ulusoy, Melda	Mathworks
WeLBP-A01	Ballroom ABC	09:00-09:30	WeLBP-A02.3
Poster-WeA (Late Breaking I			ectric Research Lab (MERL), pp.
09:00-09:30	WeLBP-A01.1	22-22.	Mitsubishi Electric Research Lab
Overcoming the Obstacle		Thornton, Jay Di Cairano, Stefano	Mitsubishi Electric Research Lab
Decentralized Control, pp.			
Liu, Fengjiao	Yale University	09:00-09:30	WeLBP-A02.4
Morse, A. Stephen	Yale Univ	Silver Sponsor: Quanser, pp. Rahaman, Josie	. 23-23. Quanser Consulting
09:00-09:30	WeLBP-A01.2	Wang, Gemma	Quanser
	Robotic Information Gathering		
under Communication Coi		09:00-09:30 <i>Silver Sponsor: SIAM</i> , pp. 24	WeLBP-A02.5
Moon, Sangwoo	University of Colorado Boulder	O'Neill, Kristin	-24. SIAM
Frew, Eric W.	University of Colorado, Bolder	·	
09:00-09:30	WeLBP-A01.3	09:00-09:30 Silver Sponsor: Cancelled, p	WeLBP-A02.6
Un-Board Capacity Fade E Learning, pp. 15-15.	Estimation Using Supervised	Kelly, Claire	p. 25-25. Wiley
	rajan The University of Texas at Dallas	09:00-09:30	
Yurkovich, Stephen	University of Texas at Dallas	Silver Sponsor: DSPACE, pp.	WeLBP-A02.7
09:00-09:30	WeLBP-A01.4	Johnson, Janice	DSpace
Simulation-Guided Reacha	able Set Estimation for Neural	09:00-09:30	WeLBP-A02.8
Network Models of Nonline	ear Dynamical Systems, pp. 16-16.	Silver Sponsor: Springer Na	
Xiang, Weiming	Augusta University	Tominich, Christopher	Springer
09:00-09:30	WeLBP-A01.5	Jackson, Oliver	Springer
SLS-MATLAB Toolbox: Do	-It-Yourself System Level	09:00-09:30	WeLBP-A02.9
Synthesis, pp. 17-17.	California Institute of Tachnology	Bronze Sponsor: Processes,	
Li, Jing Shuang Tseng, Shih-Hao	California Institute of Technology California Institute of Technology	Xiang, Wency	Processes MDPI
		09:00-09:30	WeLBP-A02.10
09:00-09:30	WeLBP-A01.6	Bronze Sponsor: Halliburton	
Mode Forces, pp. 18-18.	eparation Using Whispering Gallery	Darbe, Robert	Halliburton
Chang, Yuhe	Boston University	,	
Andersson, Sean B.	Boston University	W- 4 04	Dallas and 4
Ekinci, Kamil L.	Boston University	WeA01 RI: Optimization and Optimal	Ballroom 1
Svitelskiy, Oleksiy	Gorden College	Chair: Grover, Martha	Georgia Institute of Technology
King, Alexander S.	Gorden College	Co-Chair: Clayton, Garrett	Villanova University
Jordan, Nathan J.	Gorden College	-	WeA01.1
09:00-09:30	WeLBP-A01.7	09:30-09:55  Optimal Real-Time Schedulii	
Efficient Path Generation		Human and Multi-Robot Coll	
Autonomous Vehicles, pp.		Yao, Ningshi	Georgia Institute of Technology
Choi, Jinsuk Baek, Seungmin	Postech POSTECH	Zhang, Fumin	Georgia Institute of Technology
Lee, Hyoung-woong	Pohang University of Science and	09:55-09:58	WeA01.2
_55,,559 1150119	Technology	Optimal Evasion against Dua	al Pure Pursuit, pp. 36-43.
Han, Soohee	Pohang University of Science and	Von Moll, Alexander	Air Force Research Laboratory

Technology

Fuchs, Zachariah E.

University of Cincinnati

Pachter, Meir	AFIT/ENG	10:25-10:28	WeA01.12
09:58-10:01	WeA01.3		aster Non-Maneuvering Target
Extremum Seeking for Crea	ating Optimal Feedback Controls	by a Slower Observer, pp. 100	-105.
of Unknown Systems by Tu	ning Basis Functions, pp. 44-49.	Weintraub, Isaac	Air Force Research Labs
Scheinker, Alexander	Los Alamos National Lab	Von Moll, Alexander	Air Force Research Laboratory
Scheinker, David	Massachusetts Institute of	Garcia, Eloy	Air Force Research Laboratory
	Technology	Casbeer, David W.	Air Force Research Laboratory
10:01-10:04	WeA01.4	Demers, Zachary	Air Force Research Laboratory
	ecentralized Control Polices Via	Pachter, Meir	AFIT/ENG
<i>Damping</i> , pp. 50-57.		10:28-10:31	WeA01.13
Feng, Han Lavaei, Javad	University of California, Berkeley UC Berkeley	On the Set of Possible Minimi	
•	<u>·</u>	Unknown Functions, pp. 106-1 Kuwaranancharoen, Kananart	
10:04-10:07	WeA01.5	Sundaram, Shreyas	Purdue University Purdue University
Trees in Densely-Packed Fo	Quadrotors to Scan Moth-Infested prests, pp. 58-63.	10:31-10:34	WeA01.14
Aoun, Christoph	American University of Beirut	A Generic Solver for Unconsti	
Shammas, Elie	American University of Beirut	Integral Functional Objective:	
Daher, Naseem	American University of Beirut	Tseng, Shih-Hao	California Institute of Technology
10:07-10:10	WeA01.6	10:34-10:37	WeA01.15
Resilient Sparse Controller		Direct Synthesis of Iterative	
Disturbance Attenuation, pp		Achievable Worst-Case Conve	<del>-</del>
Bahavarnia, MirSaleh	University of Maryland, College Park	Lessard, Laurent	University of Wisconsin-Madison
Mousavi, Hossein K.	Lehigh University	Seiler, Peter	University of Michigan, Ann Arbor
10:10-10:13	WeA01.7	10:37-10:40	WeA01.16
	Quadratic Tracking Control for		for Stochastic Compositional
Dual-Stage Nanopositioning		Variance Reduced Gradient, p	•
Nagel, William	University of Utah	Lin, Tianyi	University of California, Berkeley
Leang, Kam K.	University of Utah	Fan, Chenyou	Google
